(*q.v.*); an oxidizing agent used in metallurgy, in manufacture of gunpowder and glass, for pickling and salting meat, etc., and as an artificial manure.

Salts, chem. compounds derived from acids (*q.v.*) by substitution of a metal, or radical having properties of metal (e.g., ammonium), for hydrogen.

Neutral S. are those with hydrogen completely substituted; **acid S.** (only possible from acids contg. 2 or more atoms of H) have H partly substituted, often distinguished by prefix bi-; e.g., bicarbonate of sodium is acid sodium carbonate, NaHCO_3 . Salts when soluble in water form **ions** (see **IONIC THEORY**); this is fundamental, and insoluble compounds are only called salts if analogous to known soluble compounds. S. have characteristic crystalline forms, often including water of crystallisation; thus common washing soda is $\text{Na}_2\text{CO}_3 \cdot 10\text{H}_2\text{O}$, but crystals of $\text{Na}_2\text{CO}_3 \cdot 7\text{H}_2\text{O}$, $\text{Na}_2\text{CO}_3 \cdot \text{H}_2\text{O}$, and Na_2CO_3 also exist, and washing soda loses water on exposure to dry air, crumbling to white powder (*efflorescence*). Other S. attract water from air and become liquid (*deliquescence*). Many double salts exist, e.g., alum. **S. of lemon**, acid potassium oxalate, KHC_2O_4 . Very poisonous.

Saltwort, (bot.) any variety of *Salsola*, esp. *S. Kali*; grows on sea-shore; rich in alkali salt and at one time used for manuf. of soda ash.

Saluki, dog of greyhound type, orig. bred in Arab., Pers., and Afghanistan.

Frederick the Great seized the pretext of a contract of succession to invade S., involving Prussia and Austria in the *Silesian Wars* (1741-42, 1744-45, and 1756-63, the last being the Seven Years' War). As a result, Prussia was confirmed in possession of Silesia. The plebiscite of 1921, following on the Treaty of Versailles, deprived Ger. of large sections of Upper Silesia, Poland, in particular, acquiring 66 coal-mines, many of the lead and zinc mines, and the steel foundries of Kattowitz and Königs-hütten.

Silesian Wars, three wars of Fred. the Great with Austria: 1) 1740-42 (battle of *Mollwitz*. Peace of *Breslau*; Pruss. acq. Silesia and Glatz). 2) 1744-5 (*Hohenfriedberg*, *Soor*, *Kesselsdorf*; Peace of *Dresden* leaves Prussia's gains untouched). 3) See SEVEN YEARS' WAR.

Silhouette, (Fr.) a portrait in outline or profile, usu. cut out of black paper and mounted on white ground; outline of a person or object, esp. as seen against a light background; orig. so called in mockery of E. de Silhouette, a Fr. 18th-cent. finance minister, notorious for his petty economies.

Silica, *silicon dioxide* (SiO_2), quartz in a pure form, used in glass manuf. COLLOIDAL S., a gel (see COLLOIDS) used to purify gases and liquids by *adsorption* (q.v.) of traces of impurities.

Silicates, salts of silicic acid, are of enormous importance, limitless in number, and very complex in constitution. S. of alkali and earth metals (sodium, calcium, etc.) formed by melting silica (pure sand) with oxides or carbonates of metals; solidify to glasses (q.v.). *Sodium S.* is water-glass (q.v.), soluble in water, usually sold as syrupy solution. The earth's crust consists mainly of silicates, both volcanic and primary rocks, and many sedimentary formations (e.g., clay) being S.; the crystalline mineral silicates are innumerable and often very complex. The ceramic industries depend on clay, and portland cement is also a mixture of silicates.

Silicic acid, *Orthosilicic acid*, H_2SiO_4 , exists, if at all, as a gelatinous mass (s. gel.)

Silhouette, Goethe and Fritz von Stein

at a certain degree of drying; same is true of **metasilicic acid**, H_2SiO_3 . See **SILICATES**.

Silicofluoric acid, *hydro-fluosilicic acid*, H_2SiF_6 ; used in dyeing and print. of textiles as fixing agent, for produe. of *sodium silico-fluoride*, and as an insecticide. Cannot be obtd. except as solution in water.

Silicon, (chem.) non-metallic element,

Silkworm (*Bombyx Mori*)

A) Silkworm C) Cocoon
B) The Moth-imago D) Pupa in cocoon—opened

Si; at.wt., 28.06; sp.gr., 2.3; m.p., c. $1415^{\circ}C$.; commonest element in earth's crust; occurring as silica and silicates; obtd. by reduction of quartz in elec. furnaces. Pure S. used as wireless detector crystal; combined with carbon (*S. carbide*, *carborundum*) forms very hard abrasive; used in small quants. for alloys, e.g., *S. bronze*.

Silicosis, disease of lungs caused by inhalation of silica dust; symptoms are cough, shortness of breath and the expectoration of gritty sputum.

Silk, middle layer of cocoon (q.v.) of silkworm caterpillar (*S. worm*) bred in Far East on the mulberry tree. A cocoon produces abt. 800 yards of silk thread consisting of fibroin, which is reeled off and cleansed of gum (sericine). The *Grège S.* which is extracted is made heavier to increase the bulk, by impregnation in metallic salts. A wild silkworm, the Indian oak bombyx, produces *tussore S.*, difficult to bleach. S. waste is made into *Schappe silk*. See also **ARTIFICIAL SILK**. **S.-spinner**, species of moth, whose larvae produce silk for the construction of the cocoons.

Silo, structure of wood or concrete, from 30-45 ft. high, from wh. air is excluded, used

for preserving fodder (see **SILAGE**) in green, compressed state.

Siloam, Pool of, (N.T.) at base of Mt. Zion; scene of one of Christ's miracles.

Silundum, steel-grey form of carborun-

Solution, distrib. of 1 matl. in another; i.

molecular subdivision, esp. of a solid in a

liquid (called the *solvent*); but also of two

solids, e.g., metal in metal (alloy), or of two

liquids (e.g., oil in alcohol) or a gas in a

liquid. Normally, if a given liquid is brought

into thorough and continual contact with a

solid, liquid, or gas, it takes up a limited

amount only of the substance; this amount is

called the *solubility* of the substance, and

usually increases with temperature in the

case of solids and liquids, and decreases with

gases. Solid solutions usu. have similar

limit, but liquids and solids may also be

miscible in all proportions, as alcohol and

water, or solid mercuric bromide and iodide.

The freezing point of a soltn. is lower, and

b.p. higher, than pure liquid (Raoult's

Southwark, met. bor., S. London, Eng., on S. bank Riv. Thames; 13th cent. cathed., restored 1896; Guy's Hospital; pop., 171,700.

Southwell, city, Notts, Eng., 12 m. N.E. Nottingham; cathed.; pop., 3,100.

South-West Africa, formerly *Ger. S.W. Africa*; maritime terr., S. Africa, bounded N. by Angola and N. Rhodesia, E. Bechuanaland and Cape Prov., S. by Cape Prov.; 322,400 sq.m.; pop., 275,500 (Herreros, Bushmen, Ovambos, Hottentots; 31,600 whites). Admin. under mandate by Union of S. Africa; terr. of Walvis Bay (*q.v.*) included. Healthy sub-tropical climate. Interior undulating plateau; Kalahari Desert in E.; few rivers (Orange Riv. on S. border); cattle-raising; exports diamonds, copper, lead tin, skins, and hides; cap., *Windhoek*; port, Walvis Bay.

Southwold, mkt. tn., seapt., and summer resort, Suffolk, Eng.; pop., 2,800. At *Southwold* or *Sole Bay* were fought 2 naval battles: 1) 1665, Eng. under D. of York deftd. Dutch; 2) 1672, Eng. and Fr. fleets repulsed attack by Dutch.

Sou'wester, waterproof hat with brim protecting back of neck; worn by sailors and fishermen.

Sovereign, standard of Brit. coinage containing 123.2447 grains troy of gold 11/12 fine; see POUND.

Soviet, workers' council, forming basis of govt. in Russia under *Bolshevism* (*q.v.*). Each vill., factory, workshop, etc., elects its own S., which appoints delegates to a larger congress, and so on up to the *All-Russia Congr. of Soviets*, which delegates power to Centr. Exec. Committee.

Sowerby, Leo (1895-), Amer. composer and pianist; appointed as 1st Amer. composer to Prix de Rome, 1921; *Comes Autumn Time*; *Three British Folk-Tune Settings*; *From Northland*.

Sow-thistle, *Sonchus oleraceus*, weed with milky juice; yellow flowers.

Soya bean, bean of an Asiatic leguminous plant, yielding rich oil, used in making margarine, and oil-cake for feeding cattle. Plant used in Europe and U.S.A. as a green manure.

Soyer, Alexis Benoît (1809-58), Fr. cook; chef at Reform Club, London, 1837-50; apptd. by govt. to organise kitchens in Dublin, 1847; re-organised provisioning of

hospitals, Scutari, 1855; pub. *History of Food in All Ages*, etc.

Spa. 1) tn., prov. of Liège, Belgium; pop., 8,200; watering-place since 16th century. Ger. General Headquarters in 1918. *Spa Conference* (5th-16th July, 1920), betw. Allied powers and Ger., dealt with disarmament and reparations. 2) A health resort possessing natural medicinal springs, where organised treatment of disease is given. At the better-known and more popular spas, elaborate bathing establishments have been constructed, at which many varieties of treatment are administered. There is hardly a disease for which some form of spa treatment has not been devised. In the majority of cases which are benefited by spa treatment, the mild discipline, regular hours, balanced diets, and exercise are as important as the water-drinking and bathing. Many of the waters are bottled for export, but except in the case of the less concentrated waters and those specially put up for table purposes, they should not be used except under med. advice. Characteristics of some of the more important springs and diseases for which they are recommended are as follows:—

Aix-les-Bains (Savoy), sulphurous: Rheumatism.

Bath (Eng.) thermal, radio-active, saline: Rheumatism, gout, skin affections, debility.

Buxton (Eng.), saline: Stomach, kidney, and liver disorders, gout, rheumatism.

Carlsbad (*Karlovy Vary*, Czechoslov.), alkaline, lithiated: Obesity, stomach, liver and kidney disorders.

Cheltenham (Eng.), saline: Rheumatism, etc., kidney and liver.

Contrexéville (Fr.), alkaline: Gout, rheumatism, kidney, liver, and stomach.

Droitwich (Eng.), saline and radio-active: Liver and gastric troubles.

Ems (Ger.), alkaline, saline, warm: Gout, indigestion.

Évian-les-Bains (Fr.), alkaline: Liver, intestinal, bladder.

Harrogate (Eng.), sulphurous: Skin affections, rheumatism, anaemia.

Leamington (Eng.), saline: Gout, sciatica, dyspepsia.

Mariensbad (*Marianské Lázně*, Czechoslov.), alkaline, saline, chalybeate: Gout, gastric disorders, obesity.

Přístany (Czechoslov.), thermal mud: Rheumatism, sciatica.

Plombières (Fr.), saline: Neurasthenia, dyspepsia, gastric troubles, rheumatism.

Royal (Fr.), saline, arsenated, lithiated: Rheumatism, debility, dyspepsia.

Spa (Belgium), ferruginous: Anaemia, rheumatism, and gout.

Vichy (Fr.), alkaline: Rheumatism, gout, gastric and urinary troubles.

Vittel (Fr.), alkaline: Urinary disorders.

Space, 1) in class. philos., three-dimensional frame (*Eudidian S.*) in wh. matter exists and moves; in Kantian System, a form of perception. In modern physics, universe is a four-dimensional manifold, with space-like and timelike dimensions, space without matter being a meaningless abstraction. Real space-time is finite in extent. See RELATIVITY. Mod. mathematics treats of space of any number of dimensions (Gauss, Bolyai, Lobatchewsky, Riemann). 2) Philosoph. concept of expansion and juxtaposition. In *Idealism* (q.v.), the *a priori* or ideal form given by the mind to all sensuous objects; in *Realism* (q.v.), objective appearance of reality in wh. real beings exist and move; in *materialist* and *agnostic philos.*, the inexplicable and irrational impression made by things upon the mind.

Spahi, Fr. native cavalry regiments in Tunis and Algeria. See also SEPOY.

Spahlinger, Henry (1882-), Swiss bacteriologist; produced tuberculosis serum, 1912; manufactured tetanus serum during World War; reproduced anti-tuberculous serum from 1919.

Spain, repub., occupying most of Iberian Penins., bounded N. by Bay of Biscay and Pyrenees (S. France), E. by Mediterranean, S. by Str. of Gibraltar (southernmost point of Europe, Cape Tarifa), S.W. by Gulf of Cadiz, and W. by Portugal and Atlantic. Excludes Gibraltar, but includes Ceuta and other possns. (other than Span. Morocco) on Moroccan coast, and Balearic and Canary Isls.; 195,040 sq.m.; pop., 22,760,000. Coast-line varies (rock-bound indentations or *rias* in N.W., sand-dunes in S.W. alternately rocky and flat in E.); interior mainly a plateau (*meseta*), 2,000-3,000 ft. abv. sea-lvl., with grassy plains (sheep-breeding), bounded N. by *Cantabrian Mts.*, W. by *Sierra Morena* (4,250 ft.); in extreme S. is *Sierra Nevada* (up to 11,421 feet). Plateau divided by centr. cordillera into Old Castile (N.) and New Castile (S.). Scarp towards Mediterranean bas irrigated valls. (*huertas*), growing vines, oranges, olives, sugar-cane, cotton. Riv. valls. fertile when irrigated; chf. rivs., Ebro (separating plateau from Pyrenees) and Júcar (into Mediterranean), Guadalquivir and Guadiana (into Gulf of Cadiz), Tagus and Douro through Portugal, and Minho, on Port. frontier, into Atlantic. Quicksilver mines in Almadén, copper in Rio Tinto region, lead in Cartagena, iron in Bilbao; main crops wheat, barley, oats, rye; fisheries (sardines, cod, tunny); manuf. cotton goods (Catalonia), paper, glass, automobiles. Rlys., 10,100 miles. Exports fruits, wine, olive oil, cork, ores, cotton. Chf. tns., *Madrid* (cap.), Barcelona, Valencia, Seville,

Malaga. Overseas possessions include Rio de Oro (W. Sahara), Ifni, Span. Morocco, Span. Guinea.

HISTORY: In antiquity occupied by Iberians, Celts, Phoenicians, Romans, Visigoths; captured by Saracens 711. Arabic culture. War of Christianity against Islam ended with capture of Granada, 1492; Inquisition, *autos-da-fé*. Christian States: Castile, Aragon, Navarre. By marriage of Ferdinand of Aragon with Isabella of Castile, kgdm. of Spain created, 1479. Charles V of Habsburg, 1517, also German Emperor, consolidated power after final conquest of Moors. Great extension of kingdom. Discovery of America 1492 by Columbus, Mexico 1519, California 1535, by Fernando Cortez, gave Spn. mastery of seas and peak period of trade and industry. Philip II, leader of Counter Reformation in W. Europe. Span. Armada (q.v.) destroyed, 1588. Netherlands War of Liberation, 1568-1648. Decayed under last Habsburgs, who died out 1700. War of Spain. Succession until 1714. Prosperity under later Bourbons. Charles III (1759-1788), Aranda's reforms. In 1808, Napoleon's bro., Joseph, made Kg. of Spain; Peninsular War, 1808-14; Fr. expelled. Liberal constitution, 1812, overthrown by Ferdinand VII, 1814. Reaction; Carlist War over succession of a woman; 1824, secession of Amer. colonies. Qn. Isabella driven from throne, 1868; another Bourbon dynasty, 1875; Span.-Amer. War, leading to loss of Cuba, etc., 1898. Primo de Rivera dictator, 1926; republic, 1931. Presdnt., Zamora; premier, Azaña; partial autonomy granted to "generalidad" of Catalonia, 1932.

Spalato: see SPLIT.

Spalding, mkt. tn., Lincs, Eng., on Riv. Welland, in agric. dist.; pop., 12,600.

Span, 1) distance betw. tip of thumb and tip of little finger when fully extended. 2) (Archit.) distance betw. the supports of an arch or similar structure. 3) Anc. Hebr. meas.; 9 in. (3 palms or $\frac{1}{2}$ cubit).

Spandau, W. suburb of Berlin, at confluence of rivs. Spree and Havel; former milit. hdqrs.; contained Imperial war treasure (£6,000,000 gold), part of war indemnity paid by France in 1871.

Spandrels, (archit.) the 2 three-sided spaces formed by intersection of an arch with a horiz. plane above it, when built up solid; often decorated or carved.

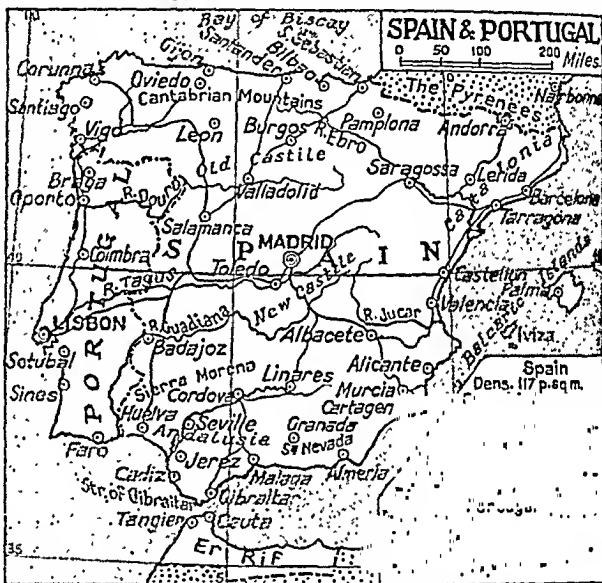

Spaniel, small strongly built sporting dog, trained to flush and retrieve game. Vari-

Spandrels

ties: *Field S.* (Clumber, Springer, Cocker, etc.); *Water S.*, *Toy S.* (King Charles, Blenheim).

Spaniole Jews, descend. of Jews exiled from Sp. who settled in Balkan Penins. and in the Levant.

Spanish: see LANGUAGE SURVEY, Romance Languages.

Spanish America, collective name for

- A) Clumber
- B) Springer
- C) Cocker

Types of Spaniel

Centr. and South Amer., orig. colon. by Sp. and Portug. and in wh. Span. and Portug. are the usual languages. **S. chestnut:** see

CHESTNUT. *S. fly*, *Cantharis vesicatoria*, insect used medic. in plaster form, its active princ., cantharidin, acting as vesicatory. **S. Guinea**, Span. colony on Gulf of Guinea, inclg. dists. of Fernando Po (volcanic island; 770 sq.m.) Rio Muni and Elobey; combined area, 10,250 sq.m.; pop., 120,800 (3,500 whites). Chf. exports: cocoa, palm oil, ivory, timber, ground nuts, rubber, copra; cap., *Santa Isabel* on Fernando Po. **S. Morocco**: see MOROCCO. **S. Succession**, War of (1701-14), betw. Fr. and Austr., and Eng. and Holland in alliance. Pr. Eugène and Marlborough victorious at Blenheim, Ramillies, Oudenarde and Malplaquet; Peace of Utrecht, Peace of Rastatt. Philip V of Sp. renounced right to Fr. throne; Austr. received Sp. Netherlands and Sp. territories in It.; Gt. Brit. acq. Newfoundland, Nova Scotia, Gibraltar, Minorca, and W. Indian Islands. Prot. Succession in Gt. Brit. acknowledged by France. **S. Town**, in., S. coast, Jamaica; pop., 8,700; rly. junction.

Spanish Fly

Spanner, tool for tightening or loosening nuts.

Double Spanner

Adjustable S., monkey wrench, screw-hammer, similar tool, span of wh. can be altered to various sizes.

Spar, 1) (naut.) long beam; general term for mast, yard, boom, gaff. 2) (Mineral.) One of various kinds of crystalline mineral; e.g., *fluor-spar*, calcium fluoride; *Greenland S.*, cryolite (*q.v.*); *Iceland S.*, transparent calcium carbonate used in making optical instruments.

Spark, (elec.) brief flash accompanying elec. discharge; results when voltage betw. two conductors in air or gas at considerable pressure (too high for steady discharge) reaches *ionising potential*; the few ions (*q.v.*) in gas acquire sufficient velocity to ionise gas by collision; the process is cumulative, until sudden discharge passes; usually oscillating. If potential is maintained, arc results.

Sparkling plug, (tech.) plug made of hard insulating material, set in screw socket for fitting to cylinder of internal combustion engine (*q.v.*), and carrying 2 points of tungsten, betw. wh. spark for igniting mixture is produced.

Sparrow-hawk

Sparring, practice or exhibition boxing. **S.-partner**, assistant to boxer in training.

Sparrow-hawk, small bird of prey with greyish-brown plumage; breeds in Brit. and throughout Europe; in Asia, ranges as far as Japan.

Sparta, 1) anc. cap. of Lacedaemon (Laconia), Peloponnesus, Greece, on Riv. Eurotas. Traditionally fndd. by immigrant Dorians, c. 1100 B.C. Under the inspiration of the royal lawgiver Lycurgus (? 9th cent. B.C.), who gave the Lacedaemonians their militaristic orientation, S. became the foremost state in Peloponnesus. Conquered Messenia 7th cent. B.C., turning the inhab. into helots. By time of Persian Wars (490 and 480 B.C.) acknowledged leader of the Greeks, but as a result of those wars leadership passed to Athens. S. defeated the Athenians in the Peloponnesian War (431-401 B.C.), but was herself defeated and disgraced by the Thebans under Epaminondas at Leuctra in 371 B.C. City destroyed by Alaric A.D. 396. In 13th cent. city of *Mistra* fndd. 3 m. W., replacing mediaeval Lacedaemon. 2) Cap. of prov. of Laconia, on site of anc. city; pop., 5,800.

Modern Sparta

Spartacus, Thracian slave, led Gladiatorial War agnst. Rome, 73-71 B.C.; deft. and killed.

Spartakusbund, extreme Soc. orgn. fndd. during World War in Ger. by K. Liebknecht and Rosa Luxembourg; led revolt, 1919; leaders killed after arrest; remnants absorbed by Communist party.

Spartel Cape, promontory (lighthouse), N.W. Morocco, opposite Gibraltar.

Spartivento, Cape, promontory, S. Italy.

Spasms, convulsive movements of one or more muscles; the involuntary muscles of intestines and blood vessels may also go into spasms.

Spat, spawn (*q.v.*) of shellfish, esp. oysters; also young oyster bef. it takes up fixed position.

Spathic iron ore, dark brown mineral, carbonate of iron.

Spavin, (vet.) disease of hock-joint in horses; **bog s.**, distension of joint with lymph; **bone s.**, stiffening of joint caused by morbid bony deposit.

Spawn, eggs of fish, frogs, newts, and other aquatic vertebrate animals. Cf. SPAT.

Speaker, presiding official in Brit. Hse. of Com., Hse. of Representatives in U.S.A., and corres. chamber in Brit. Dominions.

Speaking tube, tube enabling conversatn. to be held betw. persons at distance fm. each other in separate rooms, e.g., speaking tube connectg. bridge of ship with engine room.

Spear, thrusting or missile weapon; a long, pointed shaft.

Spearmint: see MINT.

Special constable, member of voluntary civilian body enrolled to assist and relieve regular police in times of emergency; performed important duties during World War and in General Strike (1926).

Specie points: see GOLD STANDARD.

Species, class or sub-division of a genus.

Specification (bldg., etc.), itemised description of work to be done, and materials used, in erecting buildings, machinery, etc.

Specific gravity, in C.G.S. system (*q.v.*), weight in grammes of a cubic centimetre of any body. Relative sp. gr. (density), weight as compared with equal bulk of some other body (usu. water for solids and liquids, air for gases). Water in England taken at 62° F.; on Continent of Eur. and for all scientific purposes at 4° Centigrade. **S. heat**, (phys.) amt. of heat (in gramme-calories) wh. raises one gramme of substance one degree of temp.; accd. to Dulong and Petit's Law, atomic heat (at. wt. \times S.h.) of all solid elements is nearly the same (c. 6). **S. inductive capacity**: see DIELECTRIC CONSTANT.

S. performance, right enforced by equity for actual accomplishment of things stipulated in a contract, whereas Common Law gives damages only for breach of agreement. **S. volume**, (phys.) volume of unit wt. of a substance, reciprocal of sp. gravity. V. of solids of irreg. shape measured by observing diff. betw. wt. in air and in water or other liquid; V. of powders, by enclosing them in chamber and observing change of pressure of air in chamber with given change of volume.

Spectacles, eye-glasses for correction of short sight (concave lenses), long sight (convex lenses), and astigmatism (cylindrical lenses); S. also used as protection agst. draught, dust, intense light. Periscopic S. with glasses so ground as to give correct vision sideways without turning head.

Spectator, *The*, Eng. periodical, publ. every week-day from 1 March, 1711, to 6 Dec., 1712; reached 555 numbers, of wh. Addison contrib. 274 (*Sir Roger de Coverley* papers, critical essays on *Paradise Lost*, etc.), Steele 236, Pope 1 (*The Messiah*, No. 378), Hughes 19. Revived 1714. Pres. Eng. weekly polit. and literary journal of this name fndd. 1828.

Spectrometer, instr. for measuring wave-length of lines in spectrum (*q.v.*).

Spectroscope, instr. for direct observation of spectrum.

Spectrum, (phys.) band of rays of diff. wave-lengths and colours into wh. light from a luminous body is split by a prism, or diffraction grating. Projected on a screen or ex-

Spectroscope

amined through a telescope, continuous S. (from a white-hot solid) is seen as a continuous band of light of var. colours. Sequence of colours in S. of a ray of sunlight: red, orange, yellow, green, blue, violet. Beyond the red and violet rays there are invisible rays, *infra red* and *ultra violet*. Red is least, violet most, bent or refracted by prism; inverse sequence in diffraction S.; spectra of gases consist of single lines (*line S.*); that of liquid and solid bodies is a continuous S., colours all shading into one another; both are called *Emission spectra*. In some continuous spectra dark lines are seen (*Fraunhofer's lines*), showing that light of certain colours has been absorbed by gas surrounding sun and other heavenly bodies. These *absorption spectra*, like *emission spectra*, are of use in S. Analysis (*q.v.*). Every vapour absorbs the wave-lengths wh. it emits. **S. analysis**, *spectroscopy*, methods devised by Kirchhoff and Bunsen (1859), to determine chem. composition of a body by means of the S. emitted by its glowing vapour. Each chem. element emits a no. of characteristic coloured lines. Used in chem. anal., and in determination of composition of stars and sun. See MOSELEY'S LAW.

Speculation, 1) (philos.), process of apperception through purely intellectual means or thought; ant.: *empiricism*. 2) (Econom.) Transaction with object of obtaining profit out of variation in prices (esp. on Stock Exchange).

Speculator, one who hazards on uncertain prospects of success, esp. in Stk. Exch., Foreign Exch. and Produce Exch. business, and in real estate.

Speculum, funnel-shaped surg. instr. for viewing interior of cavities of body, e.g., vagina, aural passages, etc.

Spee, Maximilian, Ct. von (1861-1914), Ger. adm.; won battle of Coronel; deftd. and drowned at battle of Falkland Isls. (8 Dec., 1914).

Speedway (or "Dirt-track") racing, motorcycle racing on curved unbanked tracks; introd. to Eng. from Australia, 1928.

Speedwell: see VERONICA.

Speke, John Hanning (1827-64), Eng. explorer; discovered source of Nile; served in milit. and scientific capacity in India; accomp. Sir F. Burton's expedn. 1858, to Centr. Africa; disc. L. Victoria Nyanza; with Grant, led 2nd expedn. from Zanzibar, down Nile to Egypt, 1860-63.

Spelt, *Dinkel*, variety of wheat (*q.v.*), resembling both wheat and barley; grown in mountain districts of Switzerland, S. Ger., and Spain.

Spelter, trade name for metallic zinc

(*q.v.*); also for easily fusible brass used for hard soldering.

Spēnborough, urb. dist., W. Riding, Yorks, Eng., 6 m. S.E. Bradford; woollens; pop., 31,000.

Spēncēr, **Herbert** (1820-1903), Eng. philos. and sociolog.; propounded theory of evolution; *Synthetic Philosophy*.

S. S., **John Poyntz Spencer**, 5th E. (1835-1910), Eng. Lib. statesm.; Ld.-Lieut. of Ireland, 1868-74, 1882; Ld. Pres. of Council, 1880-82, 1886; 1st Ld. of Admty., 1892-95; leader of Hse. of Lds., 1902-05.

Spēngler, **Oswald** (1880-), Ger. histor. and philos.; *Decline of the West*, 1922.

Spēncēr, **Edmund** (1522-1599), Eng. poet; *The Faërie Queene*; *Shepherd's Calendar*, 1579. **Spēncērian stanza**, stanza form invented by Spēncēr (*q.v.*) in adapt. of Ital. *ottava rima* (*q.v.*), in *Faërie Queene*; 8 decasyll. lines + alexandrine (*q.v.*), rhymed on 3 rhymes ababbcbcc; used by Thomson in *Castle of Indolence*, and Byron in *Childe Harold*.

Spermāceti, fat-like, white substance from skull of sperm whale; used for candles, ointments.

Spermatic cord, in man, nerve fibre containing the *vas deferens* (*q.v.*), blood-vessels, lymphatics, and nerves; passes from the testicle through the inguinal canal to the internal abdominal ring (the opening into abdomen).

Spermatozoa (Gametes), the male fertilising elements present in semen. Fertilisation occurs on union of a spermatozoa with an ovum.

Sperm whale, largest of toothed whales or *Odonoceti*, attaining length of 60 feet. Migrates from ocean to ocean, feeding mainly on giant squids. Head of enormous size, c. $\frac{1}{2}$ total length of animal. Rapidly approaching extinction owing to being hunted for oil and spermaceti (*q.v.*) and for a yellowish intestinal secretion, ambergris (*q.v.*).

Sperrin Mountains, range Co. Tyrone, N. Ire.; *Sawel*, 2,240 feet.

Spey, riv. N.E. Scot.; rises near Loch Lochy (Caledonian Canal), flows through Inverness-sh. and on border Moray and Banffsh. into Moray Firth; length 110 m.; salmon fishing.

Speyer, **Spīres**, cap. Bavarian Palatinate, Ger., on the Rhine; pop., 27,000; 11th-cent. cathed. with tombs of emperors; Palatinate Museum; cotton, machinery, tobacco.

Spezia, tn., dept. Genoa, It., on the Gulf

of S.; pop., 110,500; fortified naval base; docks; shipyards; seaside resort.

Sphagnum: see BOG-MOSS.

Sphenodon: see TUATARA.

Sphere 1) (astron.) one of the heavenly bodies, e.g., Earth. **Celestial s.**, concave spherical surface on which the heavenly bodies appear to be set. 2) (Geom.) Body with evenly curved endless surface, all points of wh. are equidistant from the centre (radius = half diam.). Surface of a sph. = $4\pi r^2$; volume = $\frac{4}{3}\pi r^3$ ($\pi = 3.1416$). **S.**

Spherical calotte

Spherical triangle

zone

Cone with spherical base

Sphere

Segment

of Influence, territory wh. by consent or formal agreement betw. the Powers is recogd. as under spec. adminis. of one Power; this territory usu. a weaker State. Expression also used to define territorial limits of a business firm's activities.

Spheroid, a solid formed by revolution of an ellipse abt. one of its axes; either *oblate* (for minor axis) or *prolate* (for major axis).

Spheroidal state, (phys.) condition under wh. drops of water on a very hot metal surface roll about without boiling; the drops do not touch the metal, but rest on a layer of steam. When the heat has penetrated thr. layer of steam, explosive evap. takes place.

Spherometer, instrument with micrometer screw for accurate measurement of lamellae and the curvature of curved surfaces, as of lenses.

Sphincter, (anat.) a band of muscle that contracts or shuts any orifice (e.g., anus.) or tube (e.g., the alimentary canal). Cf. PYLORUS.

Sphinx, in Egy., stone fig. representing a lion with head of a man or ram; S. of Gizeh represtd. Kg. Khafre, also regarded as form of the Sun-god. In Gr. myth. female monster who set a riddle to the Thebans, destroying those who failed to ans. it; Oedipus (*q.v.*) solved it, whereupon the S. destroyed herself.

Sphinx of Gizeh

Sphygmograph, apparatus by which the human pulse is caused to give a trace (as scratch on smoked glass, or ink on paper) of its variation in pressure.

Herbert Spencer

Tomb of Emperor Rudolf of Habsburg, Speyer

Spica, 1st magn. star, α in constell. Virgo (q.v.).

Spice, aromatic flavouring for food, gen. manuf. from tropical plants, such as nutmeg, mace, cloves, cinnamon, ginger, turmeric, etc.

Spice Islands: see MOLUCCAS.

Spider, arthropod which, with the sea-spider and mite, forms the class Arachnida. Ss. have head and thorax fused and are provided with four pairs of legs; can inflict a poisonous bite; spin (with silk from spinnerets) webs in which the prey is caught. Webs vary considerably, some being frameless, others wheel-like, e.g., that of *garden S.* (q.v.). Many large and small forms, a few being hunters, producing little or no silk. Eggs contained in silken cocoon. See TARANTULA.

S.-crab, long-legged, more or less oval-bodied crab, with slender claws. Many species attach living seaweeds and sponges to their bodies and limbs, to render themselves indistinguishable from their surroundings. **S.-monkey**, *S. Amer.* monkey, with long arms and a prehensile tail so remarkably sensitive that it serves the purpose of a "fifth hand"; almost entirely arboreal in habit, frequenting forests from Mexico to Paraguay.

Spiegeleisen, hard, brittle, white cast-iron, containing manganese; used in making steel by *Bessemer process*; also called *mirror iron* and, when containing over 25% manganese, *ferromanganese*.

Spikenard 1) *Aralia racemosa*, root of wh. is used in folk med. as alterative and diaphoretic. 2) *E. Ind.* valerian, from wh. *S.* of ancients (fragrant ointment) is supposed to have been derived.

Spinach, 1) *Spinacia oleracea*, herb cultivated for its leaves; used as vegetable. 2) Any veg. resembling above and used for same purpose.

Spinal cord, *Medulla spinalis*, cord wh. emerges from brain and passes down inside the spinal column; *S. C.* is covered by membranes and encloses a centr. canal wh. contains cerebro-spinal fluid; it contains nerve tracts and nerve centres (see CENTRAL NERVOUS SYSTEM) and ends in a bundle of nerves known as the *horse's tail*. Disease of the spine: see TABES DORSALIS.

Spindle, 1) (text.) Revolving rod on which the threads are taken up in spinning. 2) (Machinery) Any rod which turns on its own axis. 3) Brit. linear meas., 18 hanks or 15,120 yds. (cotton and silk); 4 hanks or 14,400 yds. (linen). **S. tree**, *Euonymus*, small evergreen tree found in Europe and N. Amer.; its tough wood was form. used for making spindles

Spider

Spine, (anat.) vertebral column; see Plate, MAN.

Spinel, a vitreous magnesium aluminate, either transparent or nearly opaque, of various colours; red transparent variety known as *spinel ruby*.

Spinet

Spinet, fore-runner of the pianoforte; each note had one string, which was plucked by a quill when the key was struck.

Spinneret, 1) (tech.) nozzle pierced with a large number of fine holes, through which artificial silk, in the liquid state, is forced into the coagulating liquid, thus spinning a thread. 2) (Zool.) See SPIDER.

Spinning, 1) (textile) process by which yarn or thread is made from loose fibre (cotton, silk, wool, etc.) Fibres are *teased* and *carded*, eliminating lumps and impurities, and a *sliver* or continuous loose rope of fibre is obtained; this passes to *draw-frame*, which pulls out sliver and renders fibres more parallel and uniform. It then passes to *comber*, which continues process of pulling-out and combing. *Flyer frames* extend fibre further and put in some *twist*, and it then passes to *S.-machines*. Chief types: *ring S.-machines*, and *mules* (q.v.). *Worsted yarn* is spun from long fibres; *carded yarn*, from short, strongly carded material. 2) (Metal.) Process by which sheet metal is pressed, while being spun in a lathe, against wooden shapes so as to form hollow objects: cups, bowls, reflectors for lamps, etc., also bottle-like objects, e.g., "sparklet" bulbs.

3) (Angling) For pike, etc., with small dead or artificial fish as bait, which is caused to revolve rapidly while drawn through the water. **S.-wheel**, instrument for separating and twisting raw fibres into thread, operated by foot and hand.

Spinning wheel

Spinoza, Baruch or Benedictus (1632-1677), Dut. philos.; excom. by Jewish community for heresy; *Ethics*; *Tractatus Theologico-Politicus*; *Political Treatise*.

Spion Kop, battle of, in 2nd Boer War; dft. of Brit. under Sir R. Buller, 24 Jan., 1900.

solution. If the ink contained lampblack, treat with turpentine, wash with soap and water and finally rinse with benzene. *Iron mould*: oxalic acid solution (1 oz. to 1 pint of water). *Nicotine* (on the fingers): rub first with solution of potassium permanganate and aftwds. with sulphurous acid. *Oil*: benzene, petrol, or carbon tetrachloride. *Dyes*: weak dilution of hydrochloric acid (spirits of salt) will freqtly. remove. *Mildew* (if fresh): soap and water; if old, oxalic acid solution (1 oz. to 1 pint). *Milk and cream*: wash with warm water, dry and sponge with carbon tetrachloride. *Paint and varnish* (oil paints): carbon tetrachloride or turpentine; for cellulose paints, a mixture of acetone and amyl acetate, equal parts. *Indelible pencil*: sponge first with methylated spirits, then with hydrochloric acid (10%), and bleach with potassium permanganate, followed by sulphurous acid. *Perspiration*: bleach with hydrogen peroxide. *Scorch*: dilute hydrogen peroxide. *Iodine*: warm solution of hypo. *Tar*: remove with turpentine or benzene. (Note that oxalic acid is very poisonous; benzene, acetone, and amyl acetate are very inflammable.) **Staining**, colouring of wood by means of brown or black tar dyes dissolved in spirit. **Stainless steel**, alloy of chromium, nickel, and iron in var. propor., acdgd. to purpose; some are soft and malleable, and others extremely hard.

Stalactite, long, tapering or cylindrical calcareous formation, resembling an icicle in form, hanging from roof of cavern, etc., produced by continuous deposits of limy matter dissolved in the water which percolates through.

Stalagmite, formation analogous to stalactite, but formed from below, by limy matter deposited on floor of cavern by water dropping from roof; often becomes united into a continuous column with stalactite forming from above.

Stalin, Jugashvili, Joseph Vissarionovich (1879-), Russ. Soviet statesman; gen. Sec. of Communist party, 1920; succ. Lenin as director of Russ. policy. Introduced Five Year Plan (q.v.).

Stalin, *Yuzovka*, tn. in Ukrainian S.S.R., in Donetz Basin; pop., 106,860; steel, cast iron, and rolled-iron industry (begun by Briton, Hughes, 1870); coal-mining.

Stalingrad, *Tsaritsin*, chf. tn., S. prov.,

Stalactite and Stalagmite

Eur. Russia (c. 32,890 sq.m.; pop., 1,507,938), on Riv. Volga; pop., 400,000; important timber market in Volga dist.; tractor factory; Volga-Don Canal (31 m.) under construction.

Stalinsk, *Kuznetsk*, tn., Siberian Area, Russ. S.F.S.R., on Riv. Tom; pop., 4,115. S. coal basin, c. 5,000 sq.m.; metallurgical works.

Stalling, (aeronaut.) loss of speed to such an extent when flying that the aeroplane ceases to be under control.

Stallion, uncastrated male horse; esp. sire for breeding.

Stalybridge, munic. bor. and mkt. tn., Cheshire; pop., 24,800; iron indries.; woollen manufacture.

Stamboul: see CONSTANTINOPLE.

Stambuliski, Alexander (1878-1923), Bulg. statesm.; leader of Agrarian party, 1908; led army agst. Sofia and secured abdic. and flight of Kg. Ferdinand, 1918; Pr. Min., 1919. Agrarian party under his guidance ruled country, condemning to death mins. who involved Bulg. in war. Murdered when Agrarians overthrown by mil. faction.

Stamen, (bot.) pollen-bearing organ of a flower.

Stamford, 1) Munic. bor., Kesteven, Lincs, Eng., on Riv. Welland; ruins of Norman cas.; pop., 9,900. 2) Tn., Conn., U.S.A., on Long Island Sound; pop., 46,300.

Stamford Bridge, 1) battle of, victory of Harold of England over Harald Hardrada of Norway, 1066; named after bridge over Riv. Derwent, Yorks, Eng., 9 m. N.E. York. 2) Famous athletic ground, Chelsea, London, opened 1878; hdqrs. of Chelsea F.C.; accom. for 80,000 spectators.

Stamp, Sir Josiah (1880-), Brit. pol. econ. and writer; Dir. Bank of England; Chmn. L. M. S. Rly.; *The National Income*.

Stamp, 1) appliance for multiple reproduc. of a pattern by printg. or sealg. 2) Offcl. receipt for payment, generally of revenue or postage; usually perforated and gummed on one side, face showing amount paid and name of country. 3) (Weights and Measures Act, 1878) Casting, engraving, etching, branding, or otherwise indelible marking. **S. battery**, for breaking up stone or ore; the *stamping hammers* are lifted by cams and fall rhythmically on the ore; the material, when crushed sufficiently, passes thr. screen. **S. duties**, duties levied by means

of stamps on various legal, financial, and commercial documents, such as agreements, leases, mortgages, share transfers, etc.

Stampings, small metal parts made from sheet-metal, by means of steel punch suitably shaped and forced by press through sheet into die, into wh. it fits exactly.

Stanchion, (bldg.) steel or iron main pillar; vertical bar in a window.

Standard, 1) that wh. is establd. by authority (basis of measurement of weight, quantity, value, etc.). 2) (Heraldry) Orig. emblem carried on a staff, e.g., Rom. Imp. Eagle; later, large flag (see ROYAL STANDARD).

3) Timber measure = 165 cu. feet. 4) (Bot.) Plant growing with upright, tree-like stem, or from a bud grafted upon an upright stem. **S. candle**, standard of light strength, adopted under Brit. Metropolitan Gas Act (1860). Replaced by international unit, represented by 1/10th power of Harcourt pentane lamp, and by Hefner (q.v.) lamp. **S. deviation**, (statist.) measure of dispersion of frequency distribution. S.D. of a group is square root of average of squares of deviations of items from their arith. mean. Equal to square root of second moment; see MOMENT

(Statist.) Written $\sqrt{\frac{\sum d_s^2}{n}}$ where \sum = sum of,

d_s = deviation of 5th item from arith. mean and n = total no. of items. **S. fineness of coinage**, proportion of fine gold or silver in coins of a country fixed by law; U.K. standard gold is 11/12th gold and 1/12th alloy, or 916.6. Silver must be $\frac{1}{2}$ silver and $\frac{1}{2}$ alloy, or 500. **S. weight of coinage**, weight of metal in coinage of a State, fixed by law. In U.K., sovereign (q.v.) = 7.98805 metric grams; shilling = 5.65518 met. grams; penny = 9.44984 met. grams.

Standard, Battle of the: see NORTHALLERTON.

Standardisation, process of putting up to standards, establishing uniformity of size and design for products or parts thereof. *British Engineering Standards Assoc.*, organistn., formed 1904, for S. of forms and dimensions in steel-construction; elec. specifcns., aeroplane construction, etc. *Bureau of Standards* (U.S.A.), office of Dept. of Commerce charged with duty of keeping weights and measures and testing them for public use; corresponds somewhat to *National Physical Laboratory* (q.v.) in England.

Standish, Miles (c. 1584-1656), one of Pilgrim Fathers; apptd. capt. of "Mayflower," 1620; commanded numerous expedtns. agnst. Indians; agent in England for New England Colony, 1625-26; see Longfellow's poem, *The Courtship of Miles Standish*.

Standstill agreement, made by several creditors for the purpose of granting respite

to debtor in payments due; granted by creditors instead of formal moratorium (*q.v.*). Ger. banks made S.A. on acceptance and other short-term credits with Eng. and Amer. banks in summer of 1931.

Stane Street, Rom. road from Chichester to Dorking and London.

Stanford, Sir Charles Villiers (1852-1924), Irish composer; operas incl. *Shamus O'Brien*, 1896; *Songs of the Fleet*; compositions very numerous in all forms.

Stanhope, 1) Chas. S., 3rd earl of (1753-1816), Eng. statesm. and scientist; M.P., 1786-86; defended Fr. Revln.; invented S. printing-press and lens; experimented in steam navig., 1795-97; pubd. *Principles of Electricity*, 1779. 2) His dau. **Lady Hester S.** (1776-1839), niece and sec. of Wm. Pitt (1803-10); on his death she settled on Mt. Lebanon, gaining great authority over local tribes; *Memoirs*, 1845. 3) His g.-son **Philip Hy. S.** (1805-75), 5th E., Eng. histor. and politic.; pubd. *History of England from Peace of Utrecht to the Peace of Versailles*, 1836-54; lives of Condé, Wm. Pitt, etc.; better known as Lord Mahon.

Stanislaus, St. (1030-79), patron St. of Poland; Bp. of Cracow, 1071; killed by Kg. Boleslaus.

Stanislas, name of 2 kgs. of Poland: **S. I.**, *Lesczinski* (1677-1766), elected under pressure by Chas. XII of Sweden, 1704; expelled after battle of Poltava, 1709; father-in-law of Louis XV of France. **S. II**, *Augustus Poniatowski* (1732-98), elected kg. through influence of Catherine II, 1764; agreed to 3rd partition of Poland; forced to abdicate, 1795; last Kg. of Poland.

Stanislavski, Constantine (1863-), stage name of Constantine Sergievich Alexiev, Russ. actor and theat. producer; fndd. Moscow Art Theatre, 1898. *My Life in Art*, 1924.

Stanley, Arthur Penrhyn (1815-81), Eng. divine and historian; leader of Broad Church party; prof. of Eccles. History, Oxford, 1856-63; Dean of Westminster, 1864; travelled in Egy. and Palestine, 1852-53, and with Pr. of Wales, 1862; pubd. *History of the Jewish Church*, 1862-65; *Commentary on Epistle to the Corinthians*, 1855; *Life of Thos. Arnold*, 1844.

S., Sir Henry Morton (1841-1904), Eng. explorer; exped. to find David Livingstone, 1871; investigated Ls. Victoria Nyanza and Tanganyika; disc. L. Edward and course of Congo. *In Darkest Africa*, 1890.

Stannaries, tin mines, specif. those in Devon and Cornwall; the tanners were sub-

ject to harsh *Stannary Courts* (abolished 1896) and held "parliaments" at Crocker Tor (Dartmoor) and Truro (one of the *Stannary Towns*) until 1752. Stannary prisons at Lydford (*q.v.*) and at Lostwithiel. Name survives in Lord Warden of the S. (member of Pr. of Wales's council).

Stannite, grey or black mineral compound of tin, copper, iron, and sulphur.

Stannous and **stannic compounds**, chem. compounds of tin (*q.v.*).

Stanza, one of several sets of lines each reproducg. exact metre, rhyme scheme, and arrangement of others; see OTTAVA RIMA.

Stapella, succulent leafless African herb of *Asclepiad* fam.; flower of *S. gigantea* more than 1 ft. across and has carrion-like odour.

Stapes (anat.): see INCUS.

Staphylococci, round bacteria, growing in clusters; cause the formation of pus.

Staple, 1) one of chief or staple commodities of trade: metals, hides, textile fibres, etc. 2) (Text.) Length of raw fibre to be spun. **S., Statute of the** (1354), providing that wool, leather, and other commodities were only to be sold at certain *staple* towns. Modified 1363, when Eng. staple was transferred from Flanders to Calais. **S. goods**, princ. commodity or productn. of country or dist.; raw material.

Staple Inn, two small quadrangles behind thoroughfare of Holborn, London; formerly one of the 9 Inns of Chancery. Holborn frontage consists of a row of Elizabethan timbered houses (c. 1586); houses in quadrangles chfly. 18th cent.; hall (built 1581) has fine hammer-beam roof, timbered screen, and 16th- and 17th-cent. stained glass.

Star, celest. body similar to the sun (*q.v.*) vastly distant from earth; classified according to *magnitude*, i.e., apparent brightness; ratio of brightness is 2.512, i.e., 1st magn. S. is 2.512 times brighter than 2nd magn. S., etc.; c. 6,000 Ss. (magn. 1 to 6) visible to naked eye; faintest S. photographed, magn. 21; nearest star to sun, *Proxima Centauri* (c. 4.3 light years); farthest from sun, stars of Milky Way (c. 100,000 light years); diameters of Ss. range from $\frac{1}{2}$ to 480 times that of sun; Ss. classified according to 10 types of spectra, representing degrees of temperature. *Variable Ss.* not of constant magnitude. **Star Clusters**, close groups of Ss., classified as: 1) *globular*, regular in shape; 2) *open*, irregular with density outwards; 3) *scattered*, isolated groups. Ss. only apparently *fixed*, and have own proper motion. See also DOUBLE STAR; NOVA.

Stapella;

Sir H. M. Stanley

Star catalogue, list of names, positions in right ascension and declination, and proper motions of fixed stars. First S.C. of over 1,000 stars made by Hipparchus (q.v.), notable later ones by Boss, Argelander, and Schönfeld. Some 500,000 stars have been catalogued. **S. Chamber**, Eng. court of special jurisdiction, est. 1487, and abol. on account of abuses, 1641. **S. of Bethlehem**, pretty, bulbous plant (*Liliaceae*) of genus *Ornithogalum*; usu. white-flowered; cultivated in gardens. **S. of India**, Order of, fndd. 1861 for Ind. princes and chiefs and for Brit. subjects in Ind. Service; comprises the Sovereign, Grand Master (Viceroy of India), Knights Grand Commanders (G.C.S.I.), Knights Commanders (K.C.S.I.), Companions (C.S.I.); ribbon: sky-blue edged white. **S., 1914**, decoration awarded to all ranks of Brit. Army who served in Fr. and Belgium betw. 5 Aug. and 22-23 Nov., 1914; clasp awarded to those who served within artillery range betw. 5 Aug. and 7-8 Nov., 1914; ribbon: red, white, and blue, watered and shaded.

Starboard: see PORT.

Starch, a carbohydrate of very complex constitution, found in almost every plant; acts as reserve of nourishment, like fat in animals. Formed in green leaves from water and carbon dioxide, the chlorophyll (q.v.) and sunlight being agents. Deposited in plant in granules of characteristic shape for each plant; these burst in hot water, forming "starch paste" (used as adhesive). S. is important food of man and animals; chief food constituent of cereals, potatoes, peas, lentils, rice, etc. Heated with dilute acids becomes soluble, and then by hydrolysis (q.v.) is split up into sugars (maltose, glucose, etc.). This change is also effected by enzymes (q.v.) pres. in saliva, pancreatic juice, and malted grain. Heated dry it becomes dextrin, or British gum. Manufactured from all kinds of cereals, roots, etc., by washing S. out with water and filtering. Uses: as *food-stuff*, in cornflour, arrowroot, custard powder, macaroni, semolina, etc.; *industrial*, as adhesive and size for textiles; prep. of sugars for fermentation; for stiffening laundered clothing.

Starfish, member of sub-kingdom *Echinodermata*, wh. includes brittle-stars, feather-stars or crinoids, sea-urchins and sea-cucumbers. The common starfish (*Asterias rubens*), has five tapering arms or rays, its mouth being in the centre of its body, with a groove extending from vicinity of mouth to apex of each arm, containing mobile extensible tube-feet, used both for loco-

motion and capture of prey. Sometimes injurious to oyster-fisheries, but useful as scavengers. Widely distributed in all seas.

Starling, widely distributed passerine bird of the Old World; plentiful in Gt. Brit. throughout year, additional migrants arriving from N. during autumn and winter. Insect feeders, beneficial to agriculture. Make untidy nests in any convenient hole in tree, cliff, wall, or thatch. Song: a mixture of chattering and flute-like notes.

Starling

Starosta, former Russ. headman and collector of taxes; also a former Polish "lord marshal" placed in command of a company of Cossacks.

Starr-Bowkett societies, a form of building society (q.v.), in which, after a special sum had accumulated, it was allotted by ballot to one of the members, to be repaid by instalments; this member often had right to sell this allotment, and often did so at a profit. They no longer exist.

Stars and Stripes, flag of the U.S.A., 13 red and white stripes symbolising 13 orig. States, with blue canton bearing 48 white stars for 48 present States.

Starter, (tech.) resistance device, for elec. motors; to prevent excess of current passing until motor has gained speed. **Motor S.**, continuous-current motor worked from an elec. battery, for setting engine of a motor-driven vehicle in motion.

Starting-gate, apparatus for ensuring a fair start for all the horses in a race.

Stassfurt, tn., Ger., on Riv. Bode; pop., 17,000; salt beds; see ABRAUM SALTS.

State, term for inhabs. of a defined area constituting, with their Govt., a collective unit possessing supreme power over them as individuals. **S. banks**, loan banks estab. by law, under the control of a State and guaranteed by it. In some countries the centr. bank is a S. Bank. There are none in the U.K.; see TRUSTEE SAVINGS BANKS. **S.B.** in U.S.A. is governed by laws of a State of the Union as opposed to the *National banks* (q.v.). **S.B.** need not necessarily be members of the Federal Reserve System (q.v.). **S. guarantee**, acceptance by State of responsibility for liabilities of debts of companies or State institutions. **S. medicine**, protection of public health, as function of govt., developed in Gt. Brit. during 19th cent.; *Public Health Acts*, 1848 and 1875; *Ministry of Health* created, 1919.

Staten Island, isl. (56 sq.m.), New York City, at mouth Hudson Riv.; part of Greater New York; sep. from New Jersey by Kill van

Kull and Arthur Kill; contains Richmond county; pop., 158,400.

Stater, anc. coin of varying value; esp. Pers. gold coin worth c. 22s.; later, silver coin, worth 4 drachmas (*q.v.*).

States-General, 1) Parl. of the United Netherlands from 15th cent.; sat at The Hague from 1593 to 1793. 2) Legislative assembly of Fr. before revol. (*États généraux*), cons. of deputies from nobility, clergy, and towns; not summoned after 1614 until 1789, when they transformed themselves into the National Assembly.

States of the Church (*Papal States*), secular dominion of the Pope, princip. in Rome and its neighbourhood; fndd. by gift of Pepin in 754, abol. by Napoleon at Fr. Revol., restored, 1815 (15,900 sq.m.; pop., over 3 mill.). United in 1870 by plebiscite with newly establd. kngdm. of Italy. In 1929 restored in very attenuated form as Vatican State (*q.v.*) by concordat betw. It. and Papacy (*q.v.*).

Statice, sea lavender, genus of *plumbaginaceous* plants, with evergreen leaves and pink, white, or mauve flowers; *S. armeria*, sea pink, or thrift; grows on cliffs and downs close to sea; small pink flower.

Static electricity, electricity present as a charge, but not in motion; produced by friction, may cause explosion or fire by sparks, e.g., in "dry" cleaning of fabrics, in washing hair with benzene or petrol.

Statics, science dealing with equilibrium of forces acting upon bodies.

Stations of the Cross, series of 14 crosses, placed around walls of a ch., generally accompanied by appropriate pictures, representing Christ's Passion from His appearance before Pilate to His burial; used as form of devotion, orig. by the Franciscans.

Statistics, numerical description of a group of items considered homogeneous as regards certain characteristics. *Subject of statistical method*: investigation of size and structure of mass phenomena and their representation by a few salient figures. In this the processes of analysis, classification, tabulation, and summarisation of the numerical material, together with a firm grasp of the subject, are essential. Inferences may be drawn by means of comparisons aided by the theory of probability, the results being clearly stated so as not to admit of misinterpretation. *Errors*: the chief sources lie in faulty collection of the raw material and inadequate attention given to definitions. *Use of S.*: to cast light on economic affairs and social phenomena of all kinds and to act as subsidiary method of investigation in most branches of science, especially natural sciences.

Statius, Publius Papinius (c. A.D. 45-96), Rom. poet; *Thebais*.

Status (Lat.), state, condition, financial

position. **S. quo**, the present state of things. **S. quo ante**, the state of affairs previously obtaining.

Statute, 1) law enacted by Parl. 2) Laws and by-laws of corporations and friendly societies. **S.-barred**, defining a right wh., owing to efflux of time or some other consideration, cannot be enforced by the Cts.; in Eng. law, recovery of debt 6 yrs. after contract to pay was (in absence of acknowledgment by debtor) S.-b by Statute of Limitations, 1623. **S. mile**: see MILE.

Statutes of limitation, laws which fix a cert. period within wh. particular actions or proceedings must be brought in courts.

Stavanger, seapt. and dist. cap., S.W. Norway, on Bukken Fjord; pop., 47,000; shipbuilding.

Stay, (naut.) large rope running from one mast-head down to another mast or to some other part of a vessel; used to support a mast and to extend a fore-and-aft sail.

Stead, William Thomas (1849-1912), Eng. journalist; ed. of *Northern Echo* (Darlington), 1871, and of *Pall Mall Gazette*, 1883-89; publ. *Maiden Tribute* and imprisoned (3 mths.), 1885, for actions taken to expose white slave traffic; fndr. and ed. of *Review of Reviews*, 1890; interested in spiritualism and ed. of *Borderland*, 1893-97; lost in *Titanic* disaster, 15 Apr., 1912.

Steam, water vapour. *Saturated S.*, steam of any pressure and corresponding temp. which is in equilibrium with liquid water. *Superheated S.*, that at temp. higher than above. 1 vol. water produces 1,675 vols. steam at boiling-point under atmospheric pressure. **S. accumulator**, serves to store S. wh. has been generated until reqd. for use: see RUTH'S S. ACCUMULATOR. **S. dome**, (engin.) extension of steam boiler upwards, from which steam is collected, thereby avoiding spray from boiling water. **S. engine**, power for mechan. work produced by expansion of steam from boiler pressure to atmospheric or vacuum (condenser) pressure, 1) by acting on piston in cylinder, 2) by impinging on vanes of wheel, in steam turbine. See also WATT, JAMES. *Piston engines* of many kinds; multiple expansion, two or more cylinders in series, steam exhausting from first after partial expansion into second, and so on. *Turbines* (*q.v.*) 2 kinds: impulse and reaction. **S. hammer**, powerful mechanical hammer operated by a piston moving up and down in a S. cylinder. Used for very large forgings. **S. navy**,

machine for excavating earth; forces lip of bucket into earth and then raises same,

dumping material in trucks or otherwise as required; *see* EXCAVATOR. **S. roller**, simple form of steam locomotive with two hind wheels and one front wheel in form of heavy roller, for rolling macadam and sim. roads. **S. superheater**, a battery of tubes, through which S. passes from the boiler; transformed into hot S. up to 450° , effects grt. saving of coal and increases efficiency.

Steamer (cooking), double saucepan, with lower vessel for water; and 2 or 3 upper containers having pipe thr. wh. steam passes; for cooking all kinds of food by steam.

Steamship, large ship driven by steam; first practicable S.S. constructed by Fulton, who used it on the Hudson Riv., U.S.A.,

White Star Liner "Majestic"

1807. Some form of prime mover depending upon generation of steam from water is nec. for propulsion of such craft; modern tendency is to use higher steam pressures, thus reducing space reqd. by machinery. Numerical zenith reached in world's mercantile fleets in immediate pre-war years; since then a steady decline in favour of motor ships (q.v.). S.Ss. still used extensively where highest powers and speeds are required.

Stearic acid, $C_{18}H_{36}O_2$, fatty acid; m.p., 69.3° ; b. p., 360° ; white, odourless, fatty, pearly scales; obtained from *stearin*, its compound (ester) with glycerine, chief or large constituent of harder veg. and anim. fats (cacao butter, tallow). S.A. used for candles, gen. mixed with solid paraffin wax. *Stearates* are soaps; sodium stearate, constituent of ordinary washing soap.

Steatite: *see* SOAPSTONE.

Steel, iron (q.v.), containing carbon or other elements, distinguished by partic. mechan. qualities; carbon content generally 1-2%. *Production*: 1) in converter; *see* BESSEMER CONVERTER; 2) by *Thomas process* (q.v.) to remove phosphorus; 3) *Siemens-Martin process* (q.v.); 4) in elec. furnace (q.v.). **Cast-s., crucible s.**, re-melted in crucible and poured. **High-speed tool s.** for cutting tools; **self-hardening s.** for same purpose; tungsten, nickel, chromium, vanadium, molybdenum S., all with spec. qualities; **stainless s.** (q.v.), iron-nickel-chromium

alloys of various composition. Relations betw. carbon and iron constituting carbon steel are very complicated. Constituents occurring in form of minute crystals are: *ferrite*, or pure iron; *austenite*, solid solution of carbon in iron; *cementite*, iron carbide (Fe_3C); *pearlite*, eutectic crystals of iron and iron carbide; *martensite*, hardest and most

World production of steel increased in 1928 by two-thirds, and in 1929 by five-sixths of 1913 total; in 1933 production declined. U.S.A. largest producer, contributing normally nearly $\frac{1}{4}$ total, and fall in U.S.A. production in 1930 is main cause for fall in world's total; in France, Russia, and Japan, little or no decline in 1930.

brittle steel, very minute crystals; *troostite*, structure of steel that has been slightly tempered or contains less carbon. Hardness of S. is due to fine structure of ferrite crystals, and pres-

ence of carbon atoms, cementite molecules, and minute cementite crystals, which prevent sliding of iron crystals. **Air-hardening s.**, hardens simply on cooling from strong heat, and so needs no quenching. **S.-framed building**, modern type of construction, consisting of

framework or skeleton of steel, clothed with stone, brick, or concrete.

Steel, Flora Annie (1847-1929), Eng. novelist; deal mainly with Anglo-Ind. life: *From the Five Rivers*, 1893; *On the Face of the Waters*, 1896; *Sovereign Remedy*, 1906.

Steele, Sir Richard (1672-1729), Irish essayist; fndd. *Tatler*, 1709, and, with Addison, *Spectator*, 1711.

Steelyard, very anc. apparatus for weighing; lever with variable arms, allowing object to be weighed to be balanced agst. single standard wt., the lever arm then being measured.

Merchants of the S., a league of Ger. merchants estab. in London in 13th cent. who

Sulphates, salts of sulphuric acid (*q.v.*).

Sulphides, (chem.) compounds of sulphur, e.g., hydrogen S., H₂S, an evil-smelling gas; wh., when passed into solutions of most metallic salts, forms S. of the metals. Sulphides of alkali metals (sodium, etc.) and alkaline earths (calcium, barium, etc.) are soluble in water; used as depilatories, luminous paints, etc.; "Mosaic gold" is S. of tin, SnS; galena, S. of lead, PbS; iron pyrites, S. of iron, FeS₂.

Sulphites, salts of sulphurous acid (*q.v.*).

Sulphocyanides: see THIOCYANATES.

Sulphur, chem. element, sym., S; at. wt. 32.06; sp. gr. 2.1; occurs almost pure in volcanic districts and combined with metals as sulphides (*q.v.*); yellow, brittle, non-metal; m.p., 113° C.; b.p. 445°. Vapour condensed quickly gives flowers of sulphur; precip. s. made from solution of polysulphides. **Rolls**, is melted S. run into moulds and allowed to cool; soluble in benzol and carbon disulphide; used for gunpowder, in sulphuric acid, vulcanising; in med. as a laxative, and ext. for eczema and other skin diseases. When burnt, S. forms s. dioxide; used for fumigating infected rooms.

Sulphuretted hydrogen: see HYDROGEN SULPHIDE.

Sulphuric acid, (chem.) oil of vitriol; H₂SO₄; most imp. inorganic acid; manuf. by lead chamber process, in which iron pyrites, FeS₂, is burned, giving sulphur dioxide, which is oxidised to S.A. by means of nitric acid vapour; or by modern contact process, in wh. sulphur dioxide (SO₂) and air or oxygen are converted to trioxide (SO₃) by contact with platinum as catalyst (*q.v.*), and then dissolved in water to form S. acid. Strongly corrosive, combines with water with evolution of heat, dehydrates and carbonises organic substances such as textiles and wood. Used in many chemical processes, in accumulators, and for combining with ammonia to make ammon. sulphate, a fertiliser. Takes up SO₃ to form fuming (or Nordhausen) acid, oleum.

Sulphurous acid, (chem.) sym. H₂SO₃; solution of sulphur dioxide in water; its salts are called sulphites; used as bleaching agent; a permitted preservative for cert. foodstuffs.

Sulpicians, R.C. relig. order of priests devoted to eccles. education and conduct of seminaries; fndd. (1642) by the Abbé Jean Jacques Olier at seminary of St. Sulpice, Paris.

Sultan, (fem., Sultana), title of a Moslem ruler.

Sultana, 1) a small, yellow dried grape without seeds, exclusively grown and prepared in Smyrna. 2) see SULTAN.

Sumach, shrubs or trees of genus *Rhus*; used in tanning; causes dermatitis.

Sumatra, second largest and westernmost

of Great Sunda Isls., Malay Archipelago; Dut. E. Indies; separated from Malay Penins. by Malacca Str.; 129,165 sq.m.; pop., 6,770,400 (20,155 Europeans). Volcanic ridge runs N. and S. (Indrapura, 12,500 ft.); E. coast flat and covered with jungle; many rivers and marshes; W. coast precipitous; coffee, tobacco, pepper, vanilla, rubber. Chf. tns., *Medan* and *Padang*.

Malay Hut, Sumatra

Sumer, (anc. geog.) dist. corresp. to lower Mesopotamia, inhab. by Sumerians, as distinct from upper Mesopotamia (*Akkad*). **Sumerians**, pre-Semitic dwellers of lower course of Euphrates and Tigris, achieved great culture in 4th and 3rd millennia B.C.; subjugated by Babylonians (2000 B.C.). **Sumerian languages**: see LANGUAGE SURVEY.

Summa (Lat.), term applied to a comprehensive statement of a partic. system of philos. and theolog., esp. that of one of the *Scholastics* (e.g., the *S. Theologica* of Thomas Aquinas).

Summer, (astron.) period betw. the *summer solstice* (June 22nd) and autumnal equinox (Sept. 23rd) in N. Hemisphere; or betw. *winter solstice* (Dec. 22nd) and vernal equinox (Mar. 21st) in S. Hemisphere.

Summer diarrhoea, epidemic diarrhoea in children living in overcrowded areas; characterised by rapid loss of weight, high temperature, and collapse. **S.-lightning**, *heat-lightning*, lightning, so distant that the thunder is inaudible. **S. school**, course of instruction, usu. at univ., during summer vacation, esp. for teachers and students of univ. extension classes. **S. time**: see DAYLIGHT SAVING.

Summons, 1) in criminal law an order addressed by a crt. to person to attend crt. and answer charge. 2) In civil proceedings, process of crt. by wh. legal proceedings are begun. 3) Order from Crown requiring a peer to attend Hse. of Lords.

Summum bonum (Lat.), the greatest good.

Sump, (tech.) chamber into which waste or spent liquid (oil, water) trickles; for oil in engines and machines, for water in mines, chem. plants, etc.

Sun, centre of solar system; sign ☉; a star (q.v.) of medium size and age; mean distance from earth 93 mill. m., wh. is traversed by light in 499 seconds and is used as astron. unit of distance in solar system; cf.

PARSEC. Proportionate dimensions (earth = 1.0): Density 0.25; diameter 109.1; surface 11,900; volume 1.3 mill.; mass 333,434. Rotation of the sun-surface varies, from 24½ days at the solar equator to 34 days at the poles. Inclination of the rotary axis twds. ecliptic 82°50'. Absolute temperature of visible illuminating surface, c. 6000°C. Above Sunshine Recorder

the photosphere (q.v.) are further gas layers: *reversing layer*, *chromosphere*, *corona*; latter visible only at times of eclipse, hence little explored. From chromosphere rise immense clouds of glowing hydrogen (see SOLAR PROMINENCES). Eddies in photosphere appear as dark *sun-spots*, often visible to naked eye (through smoked glass), of up to c. 50,000 m. diameter, whose frequency and size vary in *sun-spot period* of c. 11½ years. Frequency of sun-spots has been proved to influence terrestrial magnetism, atmospheric temp., and frequency of tropical storms; other effects doubtful. **S.-animalcule**, *Heliozoa*, microscopic animal with straight, ray-like pseudopodia. These rays of protoplasm are not really rigid, and when brought into contact with a food particle, contract or bend backwards so as to draw it towards the body mass. **S.-bird** (*honey bird*), small passerine bird of the tropics, similar to humming bird (q.v.), with brilliant feathers, thin beak, long, extensible tongue; feeds on insects and nectar from flowers. **Sunburn**, pigmentation of the skin, caused by exposure to the sun. **Sunlight**, rays of the sun are strongest in high altitudes where they are rich in the chemically powerful

Sunda Islands, collective name for volcanic archipelago, E. Indies, betw. Malay Penins. and Moluccas; **Great Sunda Isls.**: Sumatra, Java, Borneo, Celebes; **Lesser Sunda Isls.**: Bali, Lombok, Sumbawa, Sumba, Timor, Flores. Chf. exports: sugar, petroleum, tobacco, rubber, tin.

Sunday, 1st day of week; the Lord's Day among Christians, reserved for worship and rest. **S. schools**, institutions providing special relig. instruction for children on Sundays; founded as modern organised system in Eng. by Robert Raikes, of Gloucester (1735-1811). **S.S. Union**, fndd. 1803, to promote such work. **American S.S. Union**, fndd. 1824. Similar insts. in R.C.Ch., known as *Catechism* (q.v.) **Classes**. **S. trading**, first forbidden by Constantine (A.D. 321); laws against it in England since 7th cent. A.D. By *Sunday Observance Act* (1677), all trade forbidden on S., but since 1871, Act has been largely a dead letter, and provisions, temperance drinks, and tobacco may be freely sold. Women and children may not be employed in factories or workshops on S. (Act, 1901).

Sunderland, co. bor. and seapt., Co. Durham, Eng., at mouth of riv. Wear; pop., 185,900; coal-mining centre; shipb., engineering, glass-works.

Sundew, *Drosera*, bog-inhabiting carnivorous herbs; leaves exude a sticky substance by which small insects are captured.

Sundial, device for ascertaining time during the day by means of the shadow of a rod or gnomon cast by the sun on a graduated dial. Earliest reference to a sundial is in Is. xxxviii. 8, c. 700 B.C. They were common in various forms up to the 18th cent., when they were superseded by clocks; now found only as garden ornament or curiosity.

Sundsvall, port, Sweden, on W. coast Gulf of Bothnia; pop., 18,215; sawmills; shipb.; exports timber.

Sunfish, marine fish attaining 7 ft. in length, characterised by excessively compressed, deep body, and very long narrow dorsal- and anal-fins, placed one above the other at the hinder end of the body. Distribtd. throughout temperate and tropical seas.

Sunflower, *Helianthus*, high-growing composite flower with large yellow flower disks, introd. to Eur. fr. America. **Common S. H. annuus**; seeds are edible, widely used as food for cage birds and pressed for oil. *H. tuberosus*, Jerus. artichoke (q.v.).

Sunflower

Sunflower State: see KANSAS.

Sungari, r. trib. (c. 1,500 m.) of Riv. Amur, Manchuria; navigable, 1,100 miles.

Sung style, period in Chinese art, end of

10th to 13th cent. A.D., named after Chinese dynasty Sung.

Sunlum: see COLONNA.

Sunna (Arab.), way; collection of traditional sayings, actions, etc., of Mohammed. See KORAN; HADITH.

Sunn hemp, **Indian hemp**, *Crotalaria juncea*, plant native to India and Ceylon, where fibre is used for rope, etc.

Sunni, an orthodox Mohammedan, accepting authority of the Sunna (q.v.).

Sun Yat Sen (1868-1925), Chin. physician and statesm.; joined revolu. soc., 1894, and Chin. Revolu. League, 1905; kidnapped and held at Chin. Legation, London, until released on application by Ld. Salisbury, 1896; largely resp. for Chinese revol. of 1911 but Yuan Shih Kai made Presdt., Sun's ideas abandoned. Sun organised Kuo-Min-Tang Party and by 1924 had estab. govt. in Canton; after his death Kuo-Min-Tang conquered rest of China.

Suomi: see FINLAND.

Super-, Latin prefix meaning above, or placed above, as super-normal (above

Types of Sundial

normal); super-capital (archit.), cap. placed above another.

Superannuation fund, built up by contribs. from intended beneficiaries or by reduction from their salary or wages, enabling them at predetermined age to give up work in reliance on fund.

Supercharger, apparatus for supplying greater weight of fuel and air to engine than it would take of itself; some form of pump. Used in motor-racing, also in attaining great altitudes in aeroplane.

Supercooled liquid, liq. below m.p. of corresponding crystalline solid. As long as liquid is fairly fluid, solidification occurs on addition of fragment of solid, or even spontaneously. When liq. becomes very viscous, and finally glass-like, crystallisation becomes increasingly slow. Glass is supercooled liquid. See NUCLEI.

Superheater, apparatus for superheating steam as it leaves the boiler; gives higher

efficiency without higher boiler-pressure; steam, moreover, is perfectly dry. **Superheated steam**, steam heated above temp. at which it leaves boiling water, *i.e.* at a temp. higher than the saturation temp. corresponding to its pressure.

Superior, tn., Wisconsin, U.S.A., at W. end L. Superior; pop., 36,100. **Lake S.**, westernmost of Great Lakes, N. Amer., on boundary of Canada and U.S.A.; largest fresh-water lake in the world; 380 m. by 160 m. (31,200 sq.m.); depth 1,000 ft.; alt. 600 ft.; coal and iron ore on shores. Connected with L. Huron (E.) by narrow strait (St. Mary's Riv., 45 miles).

Superman, ideal man; portrayed in philos. of Nietzsche (*q.v.*) as the strong, dominant character, superior to and beyond theories of good and evil. Term first used by Goethe in *Faust*.

Supernaturalism, the study which deals with manifestations that cannot be accounted for by natural science, and, therefore, may be thought to derive from a power outside the earthly sphere or understanding.

Superphosphate, artificial manure, contg. gypsum, phosphates, and phosphoric acid; various grades; used largely for root crops.

Superposition, placing one upon another; in physics, add. of forces, motions, currents, etc., by wh. each part produces same effect as if others were not there.

Supers, extra or supernumerary actors in play, with speaking parts.

Supersaturation: *see* SATURATION.

Supersonic vibrations, (phys.) elastic vibrations of same nature as sound, but much shorter wave length and higher frequency. Destructive to life.

Superstition, credulity with regard to supernatural portents and phenomena, distinguished from recognised relig. or scient. belief.

Suppé, Franz von (1820-95), Austr. composer; *Poet and Peasant*; *Falinitza*, 1876.

Supplementary angle, (geom.) the angle necessary to make another angle equal to two right angles.

Supporters: *see* HERALDRY.

Suppository, torpedo-shaped crayon of cocoa butter or gelatin cntg. medicament for introd. into rectum, *e.g.*, morphine suppository.

Suppressio veri (Lat.), suppression of the truth.

Suppuration, inflammation which has resulted in the formation of pus (*q.v.*).

Supra-conductivity, (metall.) characteristic of certain metals (mercury, lead, tin, thallium, etc.), by which they become perfect conductors within a few degrees of absolute

zero (*q.v.*). An electric current induced in a ring of such metal continues indefinitely as long as temperature is kept low.

Supralapsarianism, doctrine of extreme Calvinists that God, in creating man, pre-ordained his fall. *Cf.* SUBLAPSARIANISM.

Suprarenals, small glands situated above the kidneys, consisting of two parts: *cortex* and *medulla*. Deficiency of cortex leads to Addison's disease (*q.v.*). The medulla produces *adrenalin*, a hormone that helps to regulate sugar metabolism and has an important influence on blood-pressure.

Supreme Court, instituted by Judicature Act, 1873; consists of 2 permanent divisions: High Crt. of Justice and Crt. of Appeal. Supreme Court of U.S.A., 9 judges, has appellate and original jurisdiction, and duty of pronouncing upon constitutionality of laws, etc.; thus at times overriding both States and Congress.

Surabaya, Dut. Residency, E. Java, E. Indies; 3,680 sq.m.; pop., 2,550,000; fertile plain; coffee and rice plantations, tobacco; stock-raising; oil. Cap., S., on Strait of Madura, opp. isl. of Madura; pop., 255,000 (25,000 Chin., 18,000 Eur.); port and naval base.

Surakarta, residency, centr. Java, Dut. E. Indies; 2,400 sq.m.; pop., 2,257,000; tobacco, coffee, sugar. Cap., S.; pop., 157,725 (11,945 Europeans).

Surat, 1) maritime dist., Bombay, India, on Gulf of Cambay; 1,600 sq.m.; pop., 700,000; rice, wheat, cotton. 2) Cap. and port of dist., on Riv. Tapti, 15 m. from mouth. Eng. settlement, 1612; chf. trading centr. India, 17th-18th cent.; Parsi temples; manuf. cotton, silk; pop., 117,500.

Surbiton, urb. dist., Surrey, Eng., suburb of Kingston-on-Thames; residential part Greater London; pop., 29,400.

Surety: *see* GUARANTEE.

Surface combustion, method of burning mixture of gas and air by bringing it in contact with heated, porous, refractory material, wh. thus becomes very hot and radiates intense heat. Combustion very complete and flameless. **S. tenslon**, (phys.) every liquid (and solid) behaves as if covered by a stretched elastic skin, due to mutual attraction of surface particles not being balanced in all directions, as in interior of liquid. Causes liquid to form drops, to rise in capillaries wh. are wetted by it, to be depressed in caps. not wetted (mercury in glass). Light objects greased (*e.g.* needle) float on water.

Surf riding, sport popular among Hawaiian natives and adopted in Australia and, to some extent, in U.S.A. and Gt. Brit.; the rider balances himself upon a small plank of wood as it is borne shoreward by the breaking waves, or as it is towed through the water by a motorboat.

Surgeon, a doctor who specialises in the branch of medicine dealing with the operative treatment of disease (*surgery*).

Surges, (elec.) irregular fluctuations of current in supply networks, due to resonance (g.r.) and capacity (g.r.) effects; may give rise to dangerously high voltages.

Surinam toad, *Pipa*, toad of trop. Amer.; the eggs are placed by the male on the back of the female, where they develop in honeycomb-like proliferations on the skin and are carried in this position until the young emerge, there being no tadpole stage.

Surinam Toad

Sur le tapis (Fr.), on the carpet; under discussion.

Surplice, loose, white vestment of varying length, with wide sleeves, worn by clergy and, usually, by choir at divine service.

Surrey, co., Eng., S. of Riv. Thames; area, 758 sq.m.; pop., 1,180,800. Contains part of Greater London. Surface generally undulating and well wooded; crossed (E. to W.) by the *North Downs*; drained by Thames, Wey, and Mole; agric., mkt.-gardening, hops, dairy-farming; co. tn., Kingston-on-Thames.

Surrogate (Lat.), a substitute, deputy; esp. an eccles. officer acting as deputy for the bp. or his chanc. in granting marriage licences.

Sursum corda (Lat.), "Lift up your hearts"; versicle before the Preface of the Mass (g.r.).

Surtax, tax payable in Gt. Brit. in addition to ord. income-tax on incomes over £2,000; present rates (1933) vary from 1s. to 7s. 6d. in the pound, plus ten per cent. in all cases.

Surtess, Robert Smith (1803-64), Eng. sporting writer and novelist; pubd. *The Horseman's Manual*, 1831; co-fndr. and ed.

(1832-37) of *New Sporting Magazine*, in wh. first appeared *Jorrocks's Jaunts and Jollities*; novels: *Handley Cross*, 1843; *Mr. Facey Romford's Hounds*, 1865.

Surtout, point de zèle (Fr.), "Above all, no enthusiasm!" Advice given by Talleyrand (g.r.) to his subordinates.

Surveying, branch of applied mathematics by which the various dimensions and characteristics of any portion of the earth's surface are determined and delineated; effected by various methods and with various instruments (see *LEVELLING*; *THEODOLITE*; *TRIANGULATION*); also from the air by means of photographs; essential preliminary to map-making, road-construction, the charting of currents, etc.; applied also in mining to subterranean survey. See also *ORDNANCE SURVEY*.

Surveying staff, rod about 9 ft. long, painted red and white in alternate bands, used in land-surveying.

Susa, 1) tn., Turin, It., on Dora Riparia; pop., 5,000. 2) Or Sousse, tn. on coast of Tunisia, N. Africa; pop., 21,500; olives. 3) Anc. cap. of Elam; civilisation earlier than that of Persia.

Susannah, wife of Joachim; subject of hist. of Susannah and the Elders in Apocrypha.

Susceptibility, (magnetic) ratio of intensity of magnetisation of body to magnetic field (inside it).

Suspension, 1) (chem.) emulsion, liquid containing an insoluble substance, e.g., cream in milk. 2) (Mus.) Note of a chord wh. is held over and prolonged into the following chord.

Susquehanna River, Eastern U.S.A.; rises in 2 main streams, joining at Sunbury, Penn.; empties into Chesapeake Bay; 420 miles.

Sussex, mar. co., S.E. Eng.; area, 1,456 sq.m.; pop., 770,100; div. administratively into *East S.* and *West S.*; crossed (E.-W.) by *South Downs*, reaching to Beachy Head; conts. part of the *Wald*. Mainly agric.; cattle-raising, dairy-farming, mkt.-gardening; fisheries. Many seaside resorts, incl. Brighton and Eastbourne. Cap., *Lewes*.

Sutherland, mar. co., extreme N.W. Scot.; area, 2,028 sq.m.; pop., 16,100; surface mainly mountainous (*Ben More Assynt*, 3,273 ft.) with grouse moors and deer forests; some fertile valls.; Loch Assynt; sheep raising, salmon fisheries; co. tn., *Dornoch*.

Sutlej, longest (925 m.) and most easterly of the "five rivers" of the Punjab; rises Himalayas, tributary of Riv. Indus (g.r.).

Sutra, Sansk. rule of life, incldg. rules of religion, philosophy, and grammar.

Sutro, Alfred (1863-1933), Eng. play-

wright and producer; pub. *The Foolish Virgins*, 1904; *Freedom*, 1916; *About Women*, 1931; and translations of Macterlinck's works.

Suttee, Sati, Hindu practice of burning widows of deceased persons, abolished by statute (1829) throughout Brit. India. Hindu relig. books give no authority for custom, wh. is said to be still occas. practised.

Telephorus, St., Pope (128-137), said to have suffered martyrdom.

Telethermometer, apparatus allowing temperature at a given place to be read from a distance. Types: Electric (thermocouple, resistance), air expansion, vapour pressure, mercury-in-steel. Used in large buildings, cold-storage rooms, warehouses, etc.

Television, apparatus for reproducing instantaneously, at distant point, image of real objects or of cinema film. In all methods, image seen by T. is formed by a large number of single spots of different degrees of brightness (like pictures printed in newspapers). Original object is "scanned," point for point, by various methods, and a signal is sent corresponding to the brightness of each point. The signal modulates a source of light at the receiving end, and the eye sees

this source of light, at each moment, as if it were in the position correspondg. to the part of object being scanned at that moment; or the light projected on a screen in correspondg. position. The whole picture must be scanned 16 times p. sec., so that a picture made up of 10,000 spots needs 160,000 signals p. second. For scanning, Nipkow disk (q.v.), rotating mirrors and other devices are used; for receiving, similar apparatus. For modulation of light, Neon lamp or Carolus (Kerr) cell. T. was first made to work practically by J. L. Baird, in London, in 1926.

Tell, William, 14th-cent. legendary Swiss patriot, alleged to hv. shot apple off own son's head, by order of Austr. bailiff.

anc. city (temples, theatre, vases, inscriptions).

Theresa of Jesus, St. (1515-82), Span. Carmelite Abbess, mystic and reformer; *The Way of Perfection*.

Therm, British unit of heat; see CALORIE.

Thermae, (Gr.) hot springs; specif. the springs connected with Rom. public baths; also the baths themselves.

Thermal waters or springs, natural warm medicinal springs, usu. containing carbonic acid or common salt, and sometimes *radio-active*.

Thermidor, 11th month in Fr. Repub. calendar (July 19th-Aug. 17th). Robespierre overthrown on 9th Thermidor (27 July, 1794).

Thermionic valve: see VALVE.

Thermite welding process, (tech.) consists in surrounding 2 iron or steel parts to be welded tog. by a finely powdered mixture of iron oxide and metallic aluminium wh., is then ignited; an extremely high temp., and also molten metallic iron, are prod., thus effecting a perfect weld.

Thermo-chemistry, science dealing with heat changes involved in chem. reactions.

Thermodynamics, science of conversion of heat into other forms of energy and vice-versa. Three Laws: 1) exact equivalence betw. heat and other forms of energy; impossibility of perpetual motion. 2) Heat can never be completely converted into other forms of energy; and none can be converted unless a "sink" (or outlet) is available at a lower temperature than the source of heat. 3) It is impossible to attain absolute zero temperature (*i.e.*, completely to remove heat). All three laws can be stated in various other equivalent forms. Chief results: *Degradation of energy*; in all transformations of energy some is irrevocably lost as low-temperature heat. The whole energy of universe tends to become uniformly distributed as heat. This is also known as the law of "Increase of Entropy." *Maximum efficiency* of conversion of heat into mechanical work or other forms of energy is given by difference between absolute temps. of source and sink of heat, divided by abs. temp. of source, *e.g.*, in steam engine, temp. of water in boiler minus temp. of cooling water in condenser, div. by temp. of boiler. This law depends on *Carnot's cycle*, imaginary, perfectly reversible engine, which is proved to give max. efficiency, in whatever form constructed. In this, heat never passes directly (by conduction) from high temp. to lower temperature. In all real engines this occurs, with loss of efficiency; *e.g.*, from fuel to water in steam-engine boiler, in petrol engine by conduction into cylinder walls. Important applications of Thermodynamics are: to all types of heat engine, to chemical processes, esp. large-

scale gas reactions; to meteorology; to fusion and vaporisation.

Thermo-electricity, elec. effect prod. by diff. of temp.; in a closed circuit made up of 2 diff. metals, a current flows if one of the junctions of the 2 metals is at a diff. temp. from the other. Circuit can be broken at any point of either. Metal for insertion of galvanometer (*q.v.*). If one junction is kept at a standard temp. current on galvanometer can be used to measure temp. (*T. pyrometry*) up to 1,600°C. A number of elements or pairs of junctions connected in series is called a **thermopile**; used for sensitive measurements, *e.g.*, radiation. T. elec. effect results from *Peltier* and *Thomson Effects* (*q.v.*).

Thermometer, appar. for measuring temp. (intensity of heat). Many types, commonest are: **mercury t.**, glass bulb with long stem, bulb and part of stem containing mercury, wh. expands and contracts with rise and fall of temp.; reading by level of mercury in tube. Alcohol, toluol, pentane used for very low temps. (mercury freezes at -38°C.). *Electric resistance T.*, *thermo-electric couple*, see RESISTANCE; **THERMO-ELECTRICITY**. For recording T., vapour pressure (ether and other liquids) acting on Bourdon gauge (*q.v.*), mercury in steel bulb, and bimetallic strip (ordinary thermograph). For scientific standard, *helium gas T.*, *maximum and minimum T.*, record highest and lowest points. Mercury pushes small iron rod in front of it, reset by magnet. *Clinical T.*, max. T. in wh. thread of mercury breaks near the bulb when T. cools, hence records max. temperature. Reset by shaking. **Thermometric scales**: range melting point of ice and boiling point of water at normal pressure, divided by Celsius into 100° (Centigrade) by Réaumur into 80°, by Fahrenheit into 180°. Celsius and Réaumur take ice point as 0°, Fahrenheit as +32°. Conversion formula $\frac{1}{2}C = \frac{1}{2}R = \frac{1}{2}(F - 32)$; or commonest, $C = \frac{5}{9}(F - 32)$; $F = \frac{9}{5}C + 32$. *Absolute thermodynamic*, or *Kelvin (K) scale*, zero about -273° C. (at which all bodies cease to contain heat), otherwise C. degrees.

Thermopile: see THERMO-ELECTRICITY.

Thermopylae, pass in centr. Greece; scene of heroic stand of Leonidas and his 300 men agst. the Persians (480 B.C.).

Thermostat, apparatus for automatically regulating a source of heat or cold in such a way as to keep an enclosure (room, oven, etc.) or liquid at constant temperature. In simplest form, expansion with temp. of metal

rod cuts off gas or electric current, or opens valve admitting cold air, water, etc. Large furnaces regulated by electrical pyrometers which control gas or air-supply by means of motor- or compressed-air-operated valves.

Thersites, in Homer's *Iliad*, quarrelsome, slanderous fellow, associate of Gks. at Siege of Troy.

Thesaurus (Lat.), treasury of words or knowledge; literary collection.

Theseus, legend. Kg. of Athens; slew the Minotaur (q.v.) with help of Ariadne; carried off Antiope, Qn. of the Amazons; figured in most of the great heroic expeditions. Assisted Pirithous at battle of Lapiths and Centaurs (q.v.).

Thesis, (acad.) treatise embodying original research by candidate for one of the higher degrees.

Thespis, Indr. of Gr. tragedy, 6th cent. B.C.

Thessalonians, Epistles to [2] (N.T.) 1st *Epis.*, earliest of St. Paul's letters (c. A.D. 53).

Thessalonica: see SALONIKA.

Thessaly, prov. of N.E. Greece; 5,156 sq. m.; pop., 493,215; contains Mts. Olympus, Pelion, Ossa, Othrys; Vale of Tempe; watered by Riv. Peneus (Salambrina); agric., pasture.

Thetis, (Gr. myth.) sea-goddess; dau. of Nereus; mother of Achilles. See NEREIDS.

Theunis, Georges (1873-), Belg. statesm.; Belg. rep. on Reparations Comm. 1919; Fin. Min., 1920; Pr. Min., 1921-25; Pres., World Econ. Confer., Geneva, 1925.

Theurgy (Gr.), divine work, miracle; also magic (q.v.).

Thibet: see TIBET. **Thibetan**: see LANGUAGE SURVEY, *Indo-Chinese*.

Thiepval, former vill. (obliterated in World War), Somme, Fr.; Brit. nat. memorial to 73,500 missing.

Thiers, Adolphe (1797-1877), Fr. histor. and statesm.; signed Treaty of Frankfurt with Germany; first Pres. of 3rd Repub., 1871-73.

Thing, Ding, Ting, among anc. Germanic peoples, tribal council, now parl. in Scand. (e.g., Norway. *Storting*).

Thiocyanates, salts of extremely unstable thio-cyanic acid (HCNS). Commonly called sulphocyanides; used in dyeing; found in "gas liquor" from gas works. **Mercury t.**, Hg(CNS)₂, formed as insoluble precipitate by adding mercuric chloride solution to potassium t.; forms when dried and made into pills, **Pharaoh's Serpents**, the pills, when set alight, burning with formation of long, serpentine tubes of ash.

Thlonville, Diedenhofen, tn. in Lorraine, Fr., on Riv. Moselle; pop., 13,040; brewing; wine; Fr. after 1659; Ger., 1871-1918.

Third, (mus.) 3rd degree of the scale and corresp. interval. **T. degree** (U.S. police), incessant examination of prisoner to extort a confession. **T. party**, term applied in Eng. law to any person appearing in a case other than the two principals.

T. P. risks, risks of damage to persons not specified in an insurance policy; Eng. Road Traffic Act, 1930, made it compulsory for motorists to insure agst. such risks.

Thirlmere, lake, Cumb., Lake Dist., Eng., 4 m. long; reservoir for Manchester Corp'n. Waterworks.

Thirty-nine Articles, The, statements put forth in 16th cent. embodying doctrinal standpoint of the Ch. of E., and with which every cleric of the Ch. must avow his general agreement at his ordination.

Thirty Tyrants, rulers set up by Sparta after her defeat of Athens (404 B.C.). **Thirty Years' War** (1618-48), betw. Prot. and Cath. princes of Ger., originating in the revival of Hussite Movement in Bohemia and resistance to absolutism of Ferdinand II of Austria. Frederick V, Elector Palatine and Kg. of Bohemia, def. near Prague (1620); Wallenstein and Tilly, Imperialist generals, conq. N. Ger., Edict of Restitution (1629). Swed. intervention under Gustavus Adolphus (1630), resulted in fall of Magdeburg, defeat of Tilly at Breitenfeld (1631), and of Wallenstein at Lützen, when Gustavus Adolphus was slain (1632). In 1635 Fr. made war on Austria. Peace of Westphalia (1648) resulted in territorial gains to Fr. (Alsace), Brandenburg, and Swed., independ. of Switz. and Netherlands, equal rights for both creeds, confirmation of Peace of Passau (1552) and Peace of Augsburg (1555).

Thistle, general name for the *Cynaroccephala* wh. incl. burdock, saw-wort and common field thistles (*Carduus*). The **Scotch t.** is *Onopordium acanthium*. **Order of T.**, second order of knighthood in Gt. Brit.; one class, limited to the sovereign and sixteen knights; fndd. by James II, 1687, suspended after the Revolution, and revived by Qn. Anne, 1703. Motto: *Nemo me impune lacessit* ("no one provokes me with impunity"). Star: St. Andrew's Cross, with thistle surrounded by motto; collar of gold; mantle of green velvet; badge (St. Andrew before, Thistle on the back); hat of

(1878-1917), Brit. poet and critic; killed in World War; pub. *George Borrow*, 1912; *Poems*, 1917; *The Last Sheaf*, posthum. 1928, etc. **T., James Henry** (1875-), Eng. statesm.; started as rly. employee, became engine driver (G.W.R.); member of

J. H. Thomas

Labour Govt. cabinets since 1924; Secretary of State for Dominions in National Govt. (1931). **T., Sidney Gilchrist** (1850-85), Eng. chemist, origntd., with his bro. **Percy**, Thomas process (q.v.).

Thomas à Kempis, name by wh. Ger. mystic and writer T. Hammerken (1380-1471) is known; *Imitation of Christ* gen. attribtd. to him, although authorship has been disputed. **Thomas Aquinas, St.** (1225-74), "Doctor Angelicus," Ital. theolog. and scholastic philos.; Thomist philos., *Summa theologiae*. **Thomas of Canterbury**: see BECKET.

Thomas process, inventor S. G. Thomas (q.v.), for freeing cast iron from phosphorus by fusion in a converter lined with basic material (dolomite), wh. combines with phosphoric acid to form *basic slag*; used for *maure*.

Thompson, Francis (1859-1907), Eng. poet and critic; contrib. to *Academy* and *Athenæum*; poems: *The Hound of Heaven*, 1893; *Sister Songs*, 1895; *New Poems*, 1897; prose: *Essay on Shelley*, 1889 (1st pubd. 1908); *Health and Holiness*, 1905. **T., Sylvanus Phillips** (1851-1916) Brit. physicist, researches in and wrtigs. on elec., magnet., etc. **T., William** (1783-1833), Irish socialist: *Labour Rewarded*, 1826. **T., Sir William** (1824-1907): see KELVIN.

Thomson, Christopher Birdwood, 1st bn. (1875-1930), Brit. soldier and statesm.; instructor, milit. school, Chatham, 1902-05; milit. attaché and chf. of milit. mission, Rumania, 1915-16, Palestine, 1917; member of Supreme Council, 1918; Air Min. in Labour Govts., 1924, 1929; cr. Bn. Thomson, 1924; perished in Rior disaster, Oct. 5, 1930. **T., Hugh** (1860-1920), Brit. artist and book illustrator; worked for *English Illustrated Magazine* from 1884; illus. for Jane Austen's novels, Mrs. Gaskell's *Cranford*, works by Thackeray, George Eliot, etc. **T., James** (1700-48), Brit. poet; pubd. *The Seasons* (Winter, 1726; Summer, 1727; Spring, 1728; Autumn, 1730); *Castle of Indolence*, 1748, etc.; plays: *Sophonisba*, 1730; *Agamemnon*, 1738; masque, *Alfred*, 1740 (in conjunction with Mallet), etc. **T., James** (1834-82), Brit. poet; wrote over signature "B.V."; known as the "Poet of Despair"; pubd. *City of Dreadful Night*, 1870-74; *A Voice from the Nile*, 1884, etc. **T., Sir Joseph John** (1856-), Eng. physicist; investigated elec. conductivity of gases; Nobel Prize (Physics), 1906.

Thomson effect, one of the constituents of *thermo-electric effect*; there is a diff. of elec. potential betw. parts of same metal at diff. temps. See THERMO-ELECTRICITY.

Thor, Donar, thunder-god of Nordic mythology.

Thorax, upper part of body in vertebrates bounded below by diaphragm, in front and at sides by ribs, and behind by middle section of vertebral column; T. contains heart, lungs, and two largest blood-vessels.

Thoreau, Henry David (1817-62), Amer. writer; friend of Emerson; imprisoned for refusal to pay taxes; *Walden, or Life in the Woods*, 1854.

Thorium, (chem.) rare earth metal, sym., Th; at. wt., 232.15; sp. gr., 12.16; m.p., abt. 1700°. Radio-active (half-period 1.65×10^{10} years); parent of Th series, ending in isotope of lead (at. wt. 206). Chief source monazite sand. Used (as nitrate) in manuf. of incandescent gas mantles.

Thorn, (Poland): see TORUN.

Thorn, spiky excrescence or spine growing from stems and boughs of certain plants; an aborted branch. **T. apple**, Jimson weed, nightshade, *Datura stramonium*, grows c. 12 in. high; white flower, egg-shaped, spinous fruits; used in med. (action similar to belladonna); the smoke from the burning leaves is used to relieve asthma.

Thorndike, Sybil (1885-), Eng. actress; with Ben Greet co. toured U.S.A. in Shakesp. repertory, 1903-07; with Miss

Thornycroft, Sir John Isaac (1843-1928), Brit. naval archit.; estab. shipb. works at Chiswick, 1866, later at Woolston, Southampton; constructed 1st Brit. naval torpedo-boat, 1877; introd. turbine propellers, etc. His bro., **Sir Wm. Hamo** (1850-1925) sculptor; R.A., 1888; *Prof. Sharpley*; *Teucer*; *Gladstone*, etc.

Thorn-apple

Thorough bass, *basso continuo*, sequence of bass notes written with figures above them to indicate the harmonies of an accompaniment when (esp. in 16th, 17th, and 18th cents.) the composer did not write out the chords in full. See **FIGURED BASS**.

Thoroughbred, animal of pure breed, with pedigree for several generations officially recorded; chfly. applied to horses and dogs.

Thorpe, Sir Edw. (1845-1925), Brit. chemist; prof. of chemistry at Glasgow, 1870; Leeds, 1874; London, 1885-94, 1909-12; director of Govt. Labs., 1894-1909; with Sir A. Rücker, carried out magnetic survey of Brit. Isles; responsible for prodn. of Dictionary of Applied Chemistry, 1890, 1927.

Thorwaldsen, Bertel (1770-1844), Dan. sculptor: *Christ*; *Ganymede* (Th. Museum, Copenhagen).

Thoth, Egypt. god of wisdom and writing; ibis-headed.

Thought, laws of, (logic) abstract statements of the princ. implied in all valid reasoning: 1) *L. of Identity*, e.g., "Man is a biped"; 2) *L. of Contradiction*, e.g., "Man is not both a biped and not a biped"; 3) *L. of Excluded Middle*, e.g., "Man is either a biped or not a biped."

Thousand and One Nights: see **ARABIAN NIGHTS' ENTERTAINMENTS**.

Thousand Guineas (race): see **GUINEAS**.

Thousand Islands, group c. 80 isls., Dut. E. Indies, betw. Java and Sumatra; included in residency of Batavia.

Thrace, dist., S.E. Balkans, N.E. of Macedonia; divided betw. Greece (S.W. Thrace), Bulgaria (N.W. Thrace), and Turkey (E. Thrace); inclds. E. section of Rhodope Mtns.; watered by Riv. Maritsa; cattle-breeding; tobacco.

Thrale, Mrs.: see **PIOZZI**.

Thread (of a screw), obtd. geomet. by helical rotation of a triangle or quadrangle; in engineering, an exterior thread is cut by means of a die, a short threaded piece of hard steel with thread cut away radially in 4 places to form cutting edges; an interior thread by a screw-tap, a threaded plug sim. cut away. Large screws, and all accurate screws, are cut on a lathe. See **SCREW**.

Threadneedle Street, thoroughfare in City of London betw. Bishopsgate and Mansion House; Bank of England (*q.v.*) (S. side of wh. occupies part of street) has been called "Old Lady of Threadneedle St."; here is also Merchant Taylors' Hall, orig. built in 14th cent., pres. bldg., 1844.

Thread-worm, a nematode worm, parasitic in the human intestine during childhood. The eggs discharged from the alimentary canal of their host may again enter humans through the mouth in connection with food or impure water.

Three-card Trick, or "*Spot-the-Lady*," sharpers' game, in wh. victim is invited to pick qn. from 3 cards placed face-downwards.

Three-colour process, photographic method of reproducing a picture, drawing, or subject direct from nature in colours with only 3 separate printing plates; 1 each for red, yellow, and blue. Three fotogr. negatives are made of the subject, focused exactly alike, through 3 diff. colour schemes which serve to cut out the colours not required, a green filter (green = yellow and blue) being used for the red negative; with these negatives three half-tone (*q.v.*) plates are made which are printed from in red, yellow, and blue ink. In direct three-col. proc., the negatives are made direct from nature. Process not to be confused with purely fotogr. proc. of colour photography.

Three Emperors, League of the, alliance betw. emperors of Ger., Aus., and Russ., 1873-79; renewed 1881, 1884.

Three Holy Children, Song of the, (Apocr.) thanksgiving hymn of 3 companions of Daniel for deliverance from Nebuchadnezzar's "fiery furnace"; used as canticle (*Benedicite, omnia opera*) in Bk. of Common Prayer. See **SHADRACH**. **Three-mile zone**, area at sea under dominion of a Power; holds good for 3 miles from coasts of Power; protected by internat. treaties. **Three-phase current**, prod. by 3 equal alternating voltages, differing in phase by $\frac{1}{3}$ of their period. See **MULTIPHASE CURRENT**. **T.-p. motors** have the advantage that they can be built without brushes.

Three Rivers, tn., Quebec, Canada, at confluence of St. Maurice and St. Lawrence rivs.; pop., 65,000; exports: iron, lumber, grain, cattle.

Threnody, ode or song of lamentation.

Thresher, or **fox-shark**, var. of shark with very elongated tail fin, fnd. in Atlantic and Mediterranean; small-toothed; alleged to attack whales.

Threshing machine, (agric.) power-driven implement for separating grain or seed of cereals from husks; revolving drum with inclined flails. Threshing orig. carried out by hand; 1st machine used c. 1786.

Threshold value, (phys.) minimum per-

ceptible value of any scientific: observed quant. (sensation, reaction, etc.).

Thrift, ladies' cushion, cushion pink, *Armeria maritima*, small bushy plant with pink flowers; grows near seashore.

Throat, external part of the neck betw. the chin and collar-bone; internal parts include the gullet, pharynx, oesophagus, larynx, trachea; see all these headings.

Throgmorton Street, thoroughfare in City of London betw. Lothbury and Old Broad St.; contains *London Stock Exchange* (blt. 1854) and *Drapers' Hall* (blt. 1667; restored 1866).

Thrombosis, formation of a blood-clot in the heart or a blood-vessel, e.g., after operations or child-birth; in the latter case it is gen. in a vein of the leg. **Thrombus**, a blood-clot in the heart or a blood-vessel; may be carried by the circulation into the lung. See EMBOLISM.

Throttle: see VALVE.

Thrush, 1) (med.) inflammation of mouth, accomp. by white patches on the inside of the mouth; common in infancy. 2) (Vet.) A degenerative condition of the wedge-shaped horny layer of the sole of the horse's foot, caused by inflammation.

Thrushes, large family of passerine birds, which includes, besides the familiar song-thrush and blackbird, the robin, blue-throats, redstarts, and chats, and a large number of tropical genera, such as the shamas and dhazal birds of India.

Thucydides (c. 460-400 B.C.). 1st Greek critical histor.: *Peloponnesian War*.

Thug, member of fraternity of assassins in N. India, who robbed and strangled travellers in honour of goddess Kali or Durga; suppressed by Lord W. Bentinck (c. 1835). Hence, any assassin or ruffian.

Thule (*Ultima Thule*), most northerly land or island known to Greeks and Romans; probably Shetland Isles.

Thulium, rare chem. element of yttrium grp.; sym. Tm; at wt., 169.4.

Thumbscrew, instrument of torture by which the thumb was crushed or broken; used by the Inquisition in Spain, and during the persecution of the Covenanters (q.v.) in Scotland.

Thun, tn. and health resort, Switzerland,

in canton of Berne, on Riv. Aar, at foot *Lake of Thun*. (19 sq.m.; 11 m. long; max. depth, 708 ft.; alt., 1,860 ft.; traversed by Riv. Aar).

Thunder, loud, crashing, or rumbling sound caused by electr. disturbance in the air, effect of wh. is visible in lightning (q.v.).

Thunderbolt, discharge of lightning and accompanying clap of thunder, formerly thought to be a bolt hurled by a god; certain kinds of stone or fossil supposed to have fallen from clouds as result of lightning discharges. See also BELEMNITES.

Thurgau, canton in N.E. Switzerland; 389 sq.m.; pop., 142,000; dairy farming, fruit-growing, fishing on Lake Constance; cap, *Frauenfeld*.

Thurible, a censer (q.v.).

Thurifer, acolyte who carries the censer.

Thuringia, **Thüringen**, repub., centr. Germany; 4,542 sq.m.; pop., 1,607,300 (92% Lutherans); main portion bounded N. and W. by Prussia, S. by Bavaria, and E. by Saxony; detached N. portion surrounded by Prussia. Surface is 33% forest (see THURINGIAN FOREST), 45% arable land, 10% pasture; mkt. gdns. in valls. of the Saale and Unstrut; lignite, potash, slate, rock-salt; textiles, machinery; cap., *Weimar*; univ. at Jena. Formed in 1919 by union of seven Thuringian States. **Thuringian Forest**, **Thüringer Wald**, mtn. chain of centr. Germany, from Riv. Werra to the W. of Eisenach; ridge c. 75 m. long; woods; slate-quarries; iron ore; health resorts; *Grosser Beerberg*, 3,229 feet.

Thursday, 5th day of week, named after Thor, Norse god of war and thunder.

Thurso, police burgh and seapt., Caithness, Scot.; fisheries; pop., 2,900.

Thwart, (naut.) seat for oarsman, placed at rt. angles to fore and aft centre line.

Thylacine, carnivorous marsupial of wolf-like appearance, fnd. only in Tasmania; greyish brown, with black stripes; somewhat smaller than Europ. wolf; mainly nocturnal.

Thyme, arom. herb. **Wild T.** (*Thymus serpyllum*), woody stem, purple flower. **Garden T.** (*T. vulgaris*) has a stronger odour than wild variety.

Thymol, (chem.) $C_{10}H_{13}OH$, crystalline phenol present in oil of thyme; strong antiseptic; used in mouth washes and as a preservative in pharmacy.

Thymus, organ situated behind upper part of breast-bone in man; undergoes atrophy about the age of 14. Its function is not known; probably produces internal secretion.

Thyratron, special type of three-electrode tube containing a small amount of inert gas, so that an arc-discharge passes from anode to cathode, the potential applied to the grid causing the arc to start.

Thyroid cartilage, largest cartilage of the larynx (*q.v.*); forms a prominence in front of neck, known as *Adam's apple*. **T. gland**, ductless gland, situated in front of the windpipe in the neck; produces internal secretion wh. has an important effect on metabolism. Swelling of the thyroid gland is known as goitre (*q.v.*). *Thyroid treatment* used in myxodema (*q.v.*) and obesity, by administration of preparation from the thyroid gland.

Thyrus (Gr. legend), wand of Dionysus, (*q.v.*); entwined with ivy and vine-leaves, terminating in a pine-cone.

Ti, chem. symbol of Titanium.

Tiara, 1) ancient Persian headdress. 2) Official headdress of Pope, high conical cap surmounted by 3 crowns, emblematical of his temporal, spiritual, purgatorial sovereignty. 3) Jewelled head ornament worn by women.

Tiber, longest riv., centr. Italy (250 m.); flows from Tuscan Apennines through the Campagna and Rome to its mouth at Ostia, on Tyrrhenian Sea.

Tiberias, tn. in Palestine, on Sea of Galilee; pop., 6,950.

Tiberius, Claudius Nero, Rom. gen.; Emp. A.D. 14-37; assassinated.

Tibet, **Thibet**, country, Centr. Asia; nominal dependency of China; bounded S. by *Himalayas* (India, Nepal, Bhutan), W. by *Karakoram Mtns.* (Kashmir), N. by *Kunlun Mtns.* (Sinkiang), and E. by Szechuan; world's highest country; plateaux 13-16,000 ft., peaks 24-26,000 ft., passes up to 19,000 ft.; climate extreme; c. 440,000 sq.m.; pop. (one-fifth monks), c. 1,700,000, Lamaist Buddhists, ruled by Dalai Lama. N. and N.W. barren; marshes and lakes without outlet (Kuku-Nor, etc.); in S. and E. are sources of Indus, Brahmaputra and Yangtze-Kiang; fauna include yaks, camels, muskdeer; some fruit (apricots, pears). Exports to China and India: camel-hair, furs, musk, gold. Cap., *Lhasa*. Brit. military expedn. to Lhasa (1904) produced trading treaty betw. T. and Brit. India. Chin. suzerainty recognised by Anglo-Russian Convention of 1907; Chin. expedition (1910) caused Tibetan hostility to China and friendliness towards Gt. Britain. Chin. representative expelled 1912.

Tibullus, Albius (c. 54-18 B.C.), Rom. elegiac poet.

TRADE UNIONS (GT BRITAIN)

World War brought rapid increase in membership. Expenditure and income largely dependent on industrial situation: in years of strikes or heavy unemployment, expenditure goes ahead of income, as seen in 1921, 1926, and 1937. In such years recourse is made to reserves.

employers concerning wages, hrs., etc.; acting also as friendly socs., organising polit. representation of labour, and aiming at general improvement of indus. conditions. **HISTORY**: T.U. movement began early in 18th cent., and was greatly stimulated by *Indus. Revolution* (q.v.). *Combinations Act* (1799) made existence of any combination for improvement of indus. condns. illegal; 1825, unions legal-

ised for discussion of wages and hrs. of work only; many unions formed but attempt at federation (1834) failed; 1860 sqq. revival of T.U.s. in form of highly disciplined, well-to-do skilled unions; 1871; united action "in restraint of trade" legalised, and union funds protected by registration as "Friendly Socys."; 1874, "peaceful picketing" permitted; 1880, great Dock Strike led to inclusion of unskilled labour in T.U. movement; 1900, *Taff Vale* decision held unions liable for damage committed by their members, causing T.U.s. to enter politics in support of Lab. party; 1906, decision revoked by *Trade Disputes Act*, giving T. unions immunity from such actions; 1909, *Osborne judgment* decided that union funds might not be used for polit. purposes; *Trade Union Act* (1913) permitted use of Union funds for any "lawful purpose," but polit. expenses must be met from special fund from wh. members might claim exemption ("contracting out," for which "contracting in" was substituted, 1927); 1927, Gen. strike made illegal, indir. members of T.U.s. made liable for damage by strike. In 1932 there were 1,098 T.U.s. in U.K. with total membership of 4,441,000.

Trades Union Congress, Brit. annual conference of delegates from most T.U.s., establ. 1868. The *Gen. Council* of the T.U.C., created 1920, and elected ann., is the exec. body of T.U. movement. In 1933 delegates were sent by 208 unions; membership, 3,368,000.

Trade winds, characteristic winds blowing almost continuously on tropical seas; from the N.E. betw. 10° and 30° N., from the S.E. between 0° and 25° S.; the Doldrums (*q.v.*) lie betw. these. See **MONSOONS**.

Trade, World, value in both impts. and expts. has increased since 1913, but the wide diff. betw. figs. of 1913 and 1924 is chfly. due to fall in purchasing power of money. The diagrams, pp. 1070 and 1071, and table are based on the official returns of 175 countries or trading areas; in using them it must be remembered that boundary changes and the creation of new states since the World War have, in some cases, caused trade wh. was formerly "domestic" to be recorded as "external," and vice versa, with the consequence that—quite apart from changes in val. of money, wh. tend to vitiate comparison betw. years—figs. for 1913 are not strictly comparable with those for post-war years. Currencies in all cases have been reduced to sterling at par values.

Since 1929 contraction in World Trade has

been progressive and excessive, as the statistics for the foll. countries show:

In milln. £s.	1930	1931	1932
U.K. Imports	1045	861	703
U.K. Exports	571	390	365
U.S.A. Imports	791	500	356
U.S.A. Exports	965	634	400
France Imports	423.6	340.5	240.8
France Exports	345.7	245.6	158.7

Trading companies, private companies occupied with overseas trade, esp. in 16th and 17th cents.; often granted comprehensive powers and rights (own militia) for purpose of carrying out colonial economic policy. Famous example: *East India Company (q.v.)*.

Traducianism, theol. doctrine that the soul is procreated in the act of generation together with the body; cf. **CREATIONISM**.

Traduttore traditore (Ital.), a translator is a traitor; *i.e.*, no translation can faithfully represent the original.

Trafalgar, Cape, Span. promontory betw. Cadiz and Gibraltar, on the Atlantic. **Battle of Trafalgar**, naval victory of Nelson (himself slain) over combined French and Spanish fleets, 21 Oct., 1805.

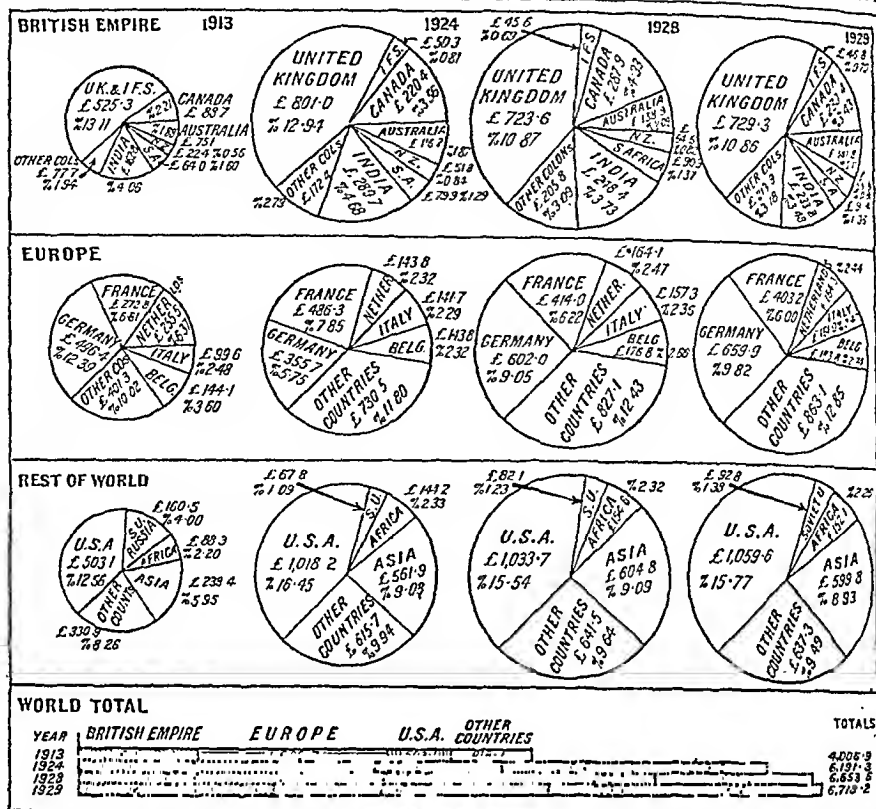

Trafalgar Square, large open space betw. Strand and Pall Mall, London; Nelson Column, 142 ft. high (1840-43), bearing statue of Nelson (17 ft.); National Gallery (*q.v.*); S. Africa House (*see* **STRAND**).

Traffic, term embracing all trade and commerce; usu. limited to the movements of persons, beasts of burden, and vehicles along roads, railways, waterways, and air routes. Increase in Gt. Brit. in number of motor vehicles, and consequent congestion of roads, esp. in urban areas, led to appointment in 1928 of Royal Commission to consider this problem, and many of their recommendations were embodied in the Road Traffic Act, 1930; *see* **ROAD**. *See also* **LONDON PASSENGER TRANSPORT BOARD**.

Traffic commissioners, officers apptd. under Road Traffic Act (1930), to control omnibuses and motor coaches in Eng. and Wales. One commissioner for London; elsewhere bodies of 3 commissioners cover groups of counties.

Tragacanth, gum obtained from a leguminous and shrublike plant having papilionaceous flowers, *Astragalus gummifer*. Used in pharmacy to suspend emulsions, in confectionery, and as a size in calico-printing, etc.

Tragedy, orig., like comedy, fm. Athenian festivals in honour of Dionysus (*q.v.*); drama in prose or verse w. elevated theme and diction and unhappy ending.

World Trade: Exports

Tragi-comedy, drama partakg. of nature of both T. and C. i.e., with tragic situations wh. right themselves and end happily, e.g., Shakespeare's *Much Ado about Nothing*.

Tragopan, large species of pheasant, fnd. in N. India and China; very brilliantly coloured, with two fleshy blue horns above eyes in male bird.

Trail, part of gun-carriage (q.v.) extending to the rear. Fitted with a *spade* to give firm purchase; sometimes split so that the piece may fire at a higher angle. Hooked on to limber (q.v.) or tractor in transport.

Trailers, goods-carrying vehicles attached to motor cars or tractors.

Train bands, companies of trained citizens assoc. for defence; originated in London in 14th cent.; on Parliamentary side in Civil War (prominent at battle of Worcester); controlled by the kg. after the Restoration; forerunners of the militia (q.v.).

Train ferry, suitably constructed steamship which, moored to a corresponding quay, allows a railway train to run aboard, and to be run on land again after passage across water. See FERRY.

Training college, or **normal school**, institution for training teachers, esp. for ele-

mentary schools; first provided by local educ. authorities under Educ. Act, 1902 (Gt. Brit.), previously by vol. associations. **T. ship**, ship in wh. boys are trained for R.N. or Mercantile Marine, e.g. "Con way," Birkenhead; "Worcester," Greenhithe; "Mercury," Southampton, etc., in Gt. Britain.

Trajan, Marcus Ulpius Trajanus (53-117), Rom. Emp., A.D. 98; greatest extension of empire in his reign.

Trajectory of projectile, (phys.) path of a body thrown or fired at any angle. Transalpine, situated beyond the Alps from the Ital. point of view.

Transcaucasia, Soc. Federated Sov. Rep., created March, 1922, consists of Georgian, Armenian, and Azerbaijan republics; c. 71,200 sq.m.; pop., 6,428,100. Mtns.; natural wealth (naphtha, manganese ore); tea, wine, tobacco; 47,000 acres under cotton. (1930). Cap., Tiflis (q.v.). See CAUCASIAN AREA, NORTH.

Transcendental, term applied in philos. to human experience of a character that is intuitive, or to knowledge acquired by intuition as opposed to empirical knowledge.

T. number, (math.) A no. is T. when it is not algebraic; i.e., when it cannot be the root of an algebraic equation, $x^n + Ax^{n-1} + Bx^{n-2} + \dots + Lx + M = 0$ where n is any positive integer, and co-efficients A, B, C, ..., L are all integers, or zero, M being other than zero, e.g., "e" and "π".

Transcendentalism, philos. theory propounded by Kant (1724-1804), emphasising the *intuitive* as contrasted with *empirical* elements in thought and knowledge.

Transcription, (mus.) adaptation of a comp. for another instrument or for several others.

Transept, (archit.) transverse portion of cruciform churches.

Transfer, 1) (finan.) to sell, to cede rights, e.g., shares in a company, goods, etc.; in case of real estate, term used in conveyance. 2)

T. of shares (Stk. Exch.), when shares are sold, they must be transferred from buyer to seller; bearer bonds, etc., are transferred by mere delivery; registered stocks by formal T. (deed); inscribed stocks (q.v.) by entries in record books. A T. fee is charged by the company.

Transfer pictures, colour-print pictures on gummed paper, transferable to other surfaces.

Transfer problem, (finan.), arises in connection with pymts. of reparations and intergovernmental debts or large interest pymts. on foreign loans. Funds may be raised in debtor countries, by taxation, etc., comparatively easily, but difficulties arise when these sums are transferred to creditor countries because rates of exch. will be markedly affected unless reverse pymts. into debtor country (e.g., for goods expd.) counteract heavy demand for currency. T.P. is one of chf. factors causing world econ. crisis of 1929-32; under Dawes Plan (q.v.) a T. committee was establd. to deal with T. of reparation payments.

Transferable vote, vote wh., at voter's direction, may be given to 2nd candidate if one primarily supported does not need it to secure election. See PROPORTIONAL REPRESENTATION.

Transfiguration, (N.T., Matt. xvii.) change in appearance of Jesus, undergone in presence of Peter, James, and John, on a mountain (prob. Hermon or Tabor).

Transformer, (elec.) apparatus for transforming alternating current of one voltage into another voltage. Based on induction (q.v.). A pair of insulated coils (primary and secondary) are wound on a laminated soft iron core wh. forms a complete ring of iron; current to be transformed is fed into one coil (primary) and magnetises iron, this induces currents in other coil (secondary) having a diff. voltage if the windings are different. Used to "step-up" voltage from dynamos at station before feeding high-tension transmission line, and to step it down again before supplying to consumers. See MOTOR GENERATOR; ROTARY CONVERTER. **Frequency t.**, for altering frequency in an alternating current.

Trans-Himalaya, centr. Asiatic mountain-range; see HEDIN MOUNTAINS.

Transit, (astron.) passage of an inferior planet (Mercury or Venus) over sun's disk, or of star across celest. meridian of a place. **T. circle**: see ASTRONOMY. **T. traffic**, through

traffic of goods, e.g., goods shipped Liverpool to N. York in transit Chicago.

Transjordan, territory, Asia, E. of Palestine, under Brit. mandate; 33,400 sq.m.; pop., 280,700; cap., Amman.

Transkei, part of Kaffraria (q.v.), Cape Prov., S. Africa; 2,500 sq.m., pop., (white), 2,500; lies E. of Kei River.

Transmigration of souls: see METEMPSYCHOSIS.

Transmutation of elements, change of one chemical atom into another; the dream of the Alchemists, who sought to accomplish T. by purely chem. means, was realised by Rutherford who showed that the particles of radio-active substs. shattered other atoms when they struck the nuclei of the latter. Recently, Cockcroft and Halton have shown that canal rays of hydrogen (protons) prodd. in vacuum tube have suff. power at a few thous. volts to transmute elements. Since nucleus occupies 100,000 part of diam. of atom, and must be struck fairly, only a minute fraction of protons score a hit; hence, no present prospect of prodt. of one element from another on a commercial scale.

Transom, (bldg.) horizontal division of window-frame.

Transport, Minister of, member of Brit. Govt. charged with supervision of rlys., road traffic, harbours, river and canal navig., ferries, bridges, etc., and elec. supplies. Ministry first constituted under Act of 1919.

France has deported convicts to Fr. Guiana since 1763, and, as well as some other countries, still continues the system.

Transporter Bridge

Transporter Bridge, bridge supptd. at either end on pylons, having a travelling cradle beneath on wh. passengers, vehicles, etc., are conveyed.

Transpose, (mus.) to render in another key.

Trans-Siberian Railway (c. 5,400 m.), opened 1903; runs from Moscow via Cheliabinsk, Omsk, Irkutsk, Chita, Manchuria to Vladivostok (see Map, next page).

Transsubstantiation, R.C. doctrine, complementary and supplementary to that of the Real Presence of Christ in the Eucharist, that the sacramental elements (q.v.) of bread and wine change their substance at

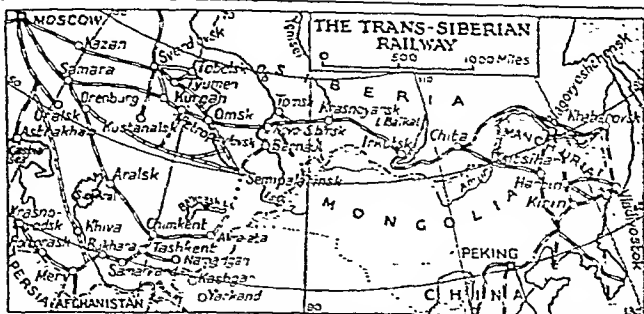

consecration, and become the actual Body and Blood of Christ, only their external properties, or "accidents," i.e., shape, taste, etc., remaining. Acceptance or denial of this doctrine has had far-reaching religious and political consequences. Luther's theory of *Consubstantiation* was that the bread and wine were still present after consecration, but that the substance of Christ's Body was also present. Others (e.g., Zwingli) have maintained that the Body and Blood of Christ are only symbolically represented by the elements of bread and wine.

Transvaal, inland prov. in N.E. of Union of S. Africa, bounded N. by S. Rhodesia, W. by Cape Prov. and Bechuanaland, S. by Orange Free State and Natal, E. by Portug. E. Trial, (legal) the formal examination of the matter in issue in a cause before a competent tribunal; sometimes incorrectly applied to a re-hearing by a court of appeal. Trials in Eng. may, according to the nature of the cause and of the court, be conducted by judge with jury, by judge without jury, by judge with assessors, or by an official referee. Acc. to Eng. usage, each of the parties may be represented by solicitor in inferior, by counsel in superior, crts.; after the pleadings comes statement of case for plaintiff or prosecution followed by examination and cross-examination of witnesses; case for defendant follows with similar procedure; final speeches for defence and prosecution are delivered; when a jury is present, the judge sums up, explaining the legal aspects of the case to the jury, whom he leaves to decide on questions of fact; jury then return a verdict, in accordance with which the judge discharges, or pronounces sentence upon, the prisoner or defendant; in trials without jury, judgment as regards both fact and law rests with the judge, with or without the aid of assessors, or with the official referee.

Trial balance: see ROUGH BALANCE.

Triangle, 1) (geom.) figure bounded by three straight lines; differentiation is made betw.: *acute-angled T.*, each angle less than 90 degrees (Fig. 2); *obtuse-angled T.*, one angle

Forms of Triangle
1) Equilateral; 2) Isosceles; 3) Right-angled;
4) Obtuse

more than 90 degrees (Fig. 4); *right-angled T.*, one angle = 90 degrees, the adjoining sides being called catheti, the one opposite, hypotenuse (Fig. 3); *equilateral T.*, with 3 equal sides and angles (Fig. 1); *isosceles T.*, with 2 equal sides and adjoining angles' (Fig. 2). 'Content of T. equals height multiplied by base divided by 2. T. [on the surface of a sphere bounded by arcs of great circles: *spherical T.* Calculation of T. by aid of trigonometry (q.v.). 2) (Mus.) Instr. made of a steel rod bent in form of T.; high-pitched, vibrating tone. 3) (Astron.) see TRIANGULUM.

Triangle

Triangulation, in land surveying, measurement of the angles of great triangles on earth's surface, for purpose of calculating lengths of their sides and thence size and shape of the land. The corners of the triangles are called *T. points*.

Triangulum, or *T. Boreale*, Northern

Triangle, constell. betw. Andromeda and Perseus (Pl., ASTRONOMY, N.C.H., A). *T. Australis*, the Southern Triangle, constell.; see Pl., ASTRONOMY, S.C.H., C.

Trianon, **Grand T.**, villa built for Madame de Maintenon, **Petit T.** for Madame Dubarry, both in park at Versailles (q.v.). In *Grand T.* (1920) treaty of peace betw. the Entente and Hung., the latter losing Croatia, Slavonia, Transylvania, and the Banat.

Triassic system, oldest of the Mesozoic rock-formations, preceding the Jurassic; see GEOLOGICAL FORMATIONS.

Tribunal, in anc. Rome, raised platform from wh. legal decisions were given.

Tribunes, from c. 490 B.C.; repres. of Rom. peoples (*plebs*) had power of invalidating decrees of Senate by means of veto.

Tribute, annual or stated payment in money or kind as acknowledgmt. of submissn. or as price of peace and protection.

Trichiniasis, a severe, and often fatal disease caused by the parasite *Trichinella spiralis* attacking the digestive tract and muscles. The parasite occurs in muscular system of pigs and develops in man, after infected flesh has been eaten. Prevented by strict inspection of meat at slaughter-houses, etc.

Trichinopoly, cap. dist. of T. (4,300 sq.m.; pop., 1,900,000), Madras, Brit. India, on Riv. Cauvery; Rock of T., 273 ft.; manuf. cheroots, soap; pop., 141,600.

Trichromatic printing, the three-colour process (q.v.).

Triclinic system: see CRYSTALS.

Tricolour, flag of three colours, esp. that of the Fr. Republic—blue, white, and red in vertical stripes.

Tric-trac, French name for backgammon (q.v.).

Trident, three-pronged spear of Neptune (q.v.).

Trier: see TRÈVES.

Trieste, seapt., It., on Gulf of T. (Adriatic), cap. prov. of T. (470 sq.m.; pop., 340,000) in dist. of Venezia Giulia; pop., 255,000; cathed. (14th cent.), museums, Rom. remains; shipb.; docks; headqrs. Trieste Lloyd Steamship Co. Austr., 1382-1919.

Trifels, ruined castle in Bavarian Palatinate, Ger.; abode of Ger. emperors in Mid. Ages; Richard Cœur de Lion imprisoned here, 1193-94.

Trigeminal nerve, three-branched sensory nerve of the face. **T. neuralgia**, acute nerve-pains of the face.

Triglyph, (archit.): see COLUMN.

Trigonometry, mensuration of triangles, section of elementary geometry, dealing with the relationship betw. sides and angles of a plane triangle, or of a spherical triangle, the latter being one formed on surface of sphere

and bounded by arcs of great circles. The trigonometric functions are aids to T.: *Sine* (abbr. *sin.*) of an angle is relationship of the side opposite the angle (perpendicular) to the hypotenuse in a right-angled triangle; *cosine* (*cos.*): or adjacent side to the hypotenuse; *tangent*, (*tan.*): perpendicular to the adjacent side; *cotangent* (*cot.*), cosecant (*cosec.*), and secant (*sec.*) are respectively reciprocals of tangent, sine and cosine. Versed sine or versine = $1 - \cos$. Trigonometrical calculation is done almost exclusively with logarithm tables (*q.v.*). T. esp. developed by Ptolemy, Regiomontanus, and Euler.

Trilobites, extinct marine arthropods found as fossils in Palaeozoic rocks; many species, world-wide distrib.; generally resemble wood-louse, but with two marked furrows length-wise on back.

Trilogy, series of 3 tragedies on one continuing theme; extended to set of 3 lit. compositions, each complete in itself, but with a common theme.

Trillion, in U.K., one million raised to the 3rd. power, represents. by 1 fold. by 10^8 noughts = 10^{18} ; in Fr. and U.S.A., one million squared (10^{12}), represents. by 1 fold. by 12 noughts.

Trim, cap. Co. Meath, Leinster, I.F.S., on Riv. Boyne; pop., 1,400.

Trimeter, metre consists of 3 measures; *Iambic trimeter*, iambic line, of 6 ft., occurs. freq. in anc. Gr. dramatic dialogue.

Trinacria, anc. name for Sicily (*q.v.*).

Trincomalee, seapt., N.E. Ceylon; pop., 9,500; natural harbour.

Tring, urb. dist. and resid. tn., Herts, in Chilterns; pop., 4,400; zoolog. museum in *T. Park* (Lord Rothschild).

Trinidad, Brit. isld., West Indies, 7 m. off coast Venezuela; 1,860 sq.m.; pop., 413,000; interior mountainous; petroleum, asphalt (from Pitch Lake; 110 ac.), cocoa, sugar, rum, copra; cap., *Port of Spain*.

Trinitarians, monastic order founded by St. John of Matha (1198) for liberation of Christians held captive by Saracens; now devoted to missionary and educational work; white habit, red and blue cross on breast.

Trinitrophenol: see PICRIC ACID.

Trinitrotoluol, (T.N.T.), powerful explosive made from toluol (*q.v.*).

Trinity, combination of 3 objects or persons considered as forming a unity; characteristic of the conception of the Deity, common in varying forms, to many relig.; esp. (in Christianity) the Holy Trinity, the union in one Godhead of three Persons, the Father, the Son, and the Holy Ghost; doctrine elaborated most fully in *Athanasian Creed*, and

not accepted by the Unitarians (*q.v.*). **T. Coll.**, 1) *Cambridge*; fndd. 1546, by Henry VIII, absorbing several earlier institutions; library built by Wren. Long list of historic names among its alumni, including Isaac Newton, Macaulay, Thackeray, Stanley Baldwin. 2) *Oxford*; fndd. 1555, by Sir Thomas Pope, of Tittenhanger, Hertfordshire. John Henry Newman was a commoner at the college. **T. Hall**, Cambridge; fndd. 1350, by Bp. of Norwich. Library has famous collection of law books. **T. House**, Corp. having charge of lighthouses on Brit. coasts, and supplying naut. assessors for maritime cases in Probate, Divorce, and Admiralty division. Governing body called "Elder Brethren." **T. Sunday**, the Sunday following Whit-Sunday, when the feast of the Holy Trinity is observed.

Trinity River, Texas, U.S.A., empties into Galveston Bay; 535 miles.

Trió, (mus.) comp. for 3 instruments (*c.g.*, piano, violin and 'cello); the quiet middle section of a march or minuet.

Triole, a stanza of 8 lines on 2 rhymes, *c.g.*, abaaabab, lines 1, 4, 7 are identical, and 2 and 8 are also identical.

Tripe, chitterlings, calf's pluck, entrails, or stomach of cattle.

Triplane, aeroplane with three pairs of wings arranged one above another.

Triple alliance, alliance betw. three Powers; *c.g.*, Eng., the Netherlands, and Swed., agst. Louis XIV, 1668. Betw. Ger., Aus., and It., 1883; renewed several times but revoked by It. in 1915. **T. Entente**, assoc. of three Powers, orig., 1907, by the accession of Russ. to Franco-Brit. *Entente Cordiale* (*q.v.*).

Triplet, (mus.) 3 notes having the time-value of 2 of the same kind.

Tripod, in anc. Greece, 3-legged stool of prophetess Pythia at Delphi; any 3-legged stand.

Tripoli, 1) Cap. of Tripolitania, N. Africa; pop., 70,700; Rom. bldgs.; caravan trade. 2) Or **Tarabulus**, tn. in Lebanon, Syria; pop., 35,800; E. coast of Mediterranean.

Tripolis, inland tn., Peloponnesus, Greece, cap. of Arcadia; pop., 14,500. Cap. of the Morea under the Turks.

Tripolitania, W. prov. of colony of Libya Italiana, N. Africa, c. 348,000 sq.m.; pop., 550,000; cap. *Tripoli*. Rom. prov. 46 B.C., later under Caliphs and Turks; Ital. since 1911.

Tripes, final honours exam. for B.A. degree at Cambridge Univ.; or one of 3 classes in wh. successful candidates are arranged.

Triptych, (archit.) tablet of 3 leaves, hinged together and fixed to walls, usu. in churches; both surfaces bear paintings; on folding, alternative picture is presented; form of altar-shrine; see DIPYCH.

Tubercle, a tiny nodule produced in the body by the attack of the *Bacillus tuberculosis* which is the bacillus responsible for the disease

Tuberculosis. There are two varieties of the bacillus, the human and the bovine. In adults, the commonest form is tuberculosis of the lungs, known as *phthisis* or consumption. In young people, tuberculosis attacks the joints, especially the hip-joint, and also the glands of the abdomen. In children, it attacks the lymphatic glands of the bronchial region and the neck. In babies, a gland, loaded with tubercle bacilli, may discharge into the blood, when the bacilli are carried all over the body, and death from *miliary tuberculosis* occurs. When the bacillus is grown in a culture tube outside the body, the fluid in which it has grown is concentrated by heat, freed from the growth by filtration, and is then known as *tuberculin*, to be used for diagnosing the presence of the disease when it is suspected. The best treatment is open-air life in a sanatorium; this is most successful in high altitudes (Switzerland), where the patient can be exposed to the sun. Types are made of an alloy of lead, tin, antimony, and copper.

Type composing machines, first practical machine inv. by Dr. W. Church, an American resident in Eng. (1822). Chf. machines now in use are: **Monotype**, inv. by Tolbert Lanston, c. 1888; casts and sets single types; process needs two machines; on the first the operator, working at keyboard, perforates roll of paper which, passing through casting machine, directs making of correct letters and spaces; largely used for book printing. **Linotype**, inv. by Ottmar Mergenthaler (U.S.A.), c. 1876 and greatly improved since. It casts metal bars or slugs upon which, properly spaced, is type for the words of a complete line; operator, working at keyboard, sets up little matrices or moulds of the various letters, which are conveyed, when line is completed, to mouth of a pot containing molten metal where the slug is cast; the slugs, as cast, assemble one behind the other, and the matrices automatically return to their places in the magazine from

Many uses, e.g., in mus. instr. (cornet à piston). 2) (Wireless, electron, thermionic) Exhausted glass (or metal) vessel, containing filament heated by low-tension current and emitting electrons, *q.v.* (tungsten filament; or same coated with metallic oxides for dull-emitter *q.v.* Also anode (usu. nickel), and in case of triode, tetrode, pentode one or more grid electrodes. Positive end of high tension battery is applied to anode, negative to filament, causing flow of electrons, *i.e.*, an elec. current, wh. is weakened or reinforced when voltage is applied to grid, resulting in *amplification* (*q.v.*). Characteristic curve of V. shows how anode current varies with voltage applied to grid. A small permanent voltage—*grid bias*—is often applied to grid. **Rectifying v. (diode)** has no grids, only filament and anode. When alternating voltage is applied, current can pass in one direction only. **Hard v.** has extremely high vacuum; **soft V.** contains a little gas. **Triode V.** used in wireless reception, and for generating continuous oscillations and waves for transmission. **Rectifying V.** used in wireless for supply of anode H.T. voltage, and for charging accumulators. **Screen grid, four-electrode (tetrode) valve** having second grid outside first, maintained at constant potential; prevents uncontrollable reaction; used in high-frequency amplification. **Pentode, five-electrode valve,** has three grids, outermost (nearest anode) being connected to filament. Used as output valve, since output almost independent of anode voltage. See WIRELESS TELEGRAPHY.

Clausewitz as the continuation of politics by other means; object, the imposition of a nation's wish on the enemy, so that, as the loser, he will submit to all the victor's conditions, *i.e.*, surrender at discretion. In primitive communities this may involve complete extermination of the beaten side; in more complex society not possible, owing to reaction on hitherto neutral neighbours; also, few wars are fought to a finish. W. is possible only betw. sovereign States; betw. a State and its dependency armed conflict is called *Revolt*, within a State, strife of rival factions is *Civil War*. Customary to distinguish *aggressive* and *defensive* W., on the ground that one or other of the combatants must be the attacker; in practice, every nation, once W. has been declared, claims to be fighting a defensive W. Most great wars are betw. groups of nations or allies. Each side must prosecute the campaign with all the powers at its disposal: half-hearted measures lead to defeat. The campaign demands the employment of armed forces, prev. trained in peace-time: soldiers, sailors, and airmen (in Gt. Brit., army, navy, and air force); peace-time establishments are strengthened by mobilisation of reserves, militia, territorial forces, volunteers, etc. Requirements of armed forces (munitions, material, transport, stores, food, etc.) supplied by reorganisn. of civilian population. Object of c.-in-ch. of a force so to arrange all his forces as to ensure general victory over the enemy (*strategy*), and, once a battle is engaged, to direct operations leading to victory in that battle (*tactics*). **W. graves**, Brit. milit. cemeteries in all theatres of World War; in charge of *Imperial War Graves Commission* (900 milit. cemeteries in Fr. and Belgium; many Brit. nat. memorials to the missing). **W. guilt**, admission of responsibility for World War by Ger. and her allies (Art. 231

that section of officers and crew of ship who together attend to her working for an allotted time. *Dog W.*, two watches of 2 hours, one from 4 to 6, other from 6 to 8 P.M.

Water, covers abt. $\frac{3}{4}$ of surface of earth; determining factor in economics of nature and for living beings; in solid state, *ice*, as gas, *steam*; greatest density of 4° C., expands on freezing, therefore ice floats on W.; on acc. of its great specific heat, W. only follows slowly fluctuations of temp. of air, e.g., in spring; therefore climate near sea is more equable than climate inland. W. is a combination of hydrogen and oxygen (H₂O); almost always contains impurities; chem. pure as *distilled W.*; sea-water (*q.v.*) up to 4% salts, esp. common salt or sodium chloride; also traces of gold. *Hardness of w.*, *see* HARDNESS. *Purification of W.*, removing impurities wh. are harmful for indus. or domes. purp.; substances in suspension (sand, mud, organisms) removed by subsidence in reservoirs and by filters (sand, cloth, porous earthenware); destruc. of bacteria by means of chemicals, e.g., chlorine; extrac. of iron by treatment with air (spraying and trickling over coke); lime and magnesia salts (causing *hardness*) by treatment with lime, soda, or zeolites (*q.v.*), *base-exchange* system.

Water-beetle, large pond-beetle belonging to order *Dytiscidae*, having legs adapted for swimming; herbivorous; larvae predatory. **W.-boatman**, aquatic insect of carnivorous habit, found in stagnant water. **W.-bugs**, predatory aquatic insects, inhabiting ponds in temperate regions; mouth-parts adapted for sucking. Various species: water scorpion, oval water-bug, water boatman (*q.v.*). **W.-colour**, pigment 'diluted with water instead of oil; usu. applied in transparent washes for landscapes, sketches, etc. **W.-concentration** processes for ore-dressing; finely ground ore is suspended in water, and var. constits. of diff. spec. grav. are caused to sep. from one another; valuable minerals (heads, concentrates) are usu. heavier than worthless (tails, gangue). Chf. machines: classifiers, thickeners, jigs, tables, rag-frames. Used in concentrating tin, gold, platinum, zinc, lead, ores, and in purifying coal. **W. cress**, *Nasturtium officinalis*, plant growing wild in streams, also cultivated in beds in running water; leaves used as a salad. **W.-flea**, very small freshwater crustacean of the family *Daphniidae*; swarm in ponds during summer months, swimming with active, jerky motion. Compressed oval form, partly covered by thin transparent bivalve carapace, through which the internal organs can be seen. **W. gas**, gas formed by passing steam and some air over burning coke or anthracite; consists of carbon monoxide and hydrogen, both of wh. burn, and nitrogen and some carbon dioxide wh. do not burn. Used for adding to coal-

gas, firing furnaces, driving gas engines, etc. **W. glass**, sodium or potassium silicate made by melting soda or potash with quartz sand; sold as syrupy liquid, solution of W.G. in water; used in manuf. of artific. stone; "filling" soap; fireproof paint; cementing; preserving eggs. See **SILICIC ACID**. **W. lily**, *Nymphaea alba*, floating leaves and large white flowers wh. rise to surface and expand in sunlight and close and sink at night. Yellow W.L., *Nuphar lutea*, is smaller. See **LOTUS**. **W.-line**, line of intersection of surface of a liquid and floating body, partic. a ship. See **PLIMSOLL MARK**, for water-line of ships. **W.-melon**: see **MELON**. **W. meter**, (phys.) apparatus for measuring amt. of water flowing thr. pipes. Var. systems: vanes turned by water, and attached to revolution counter; pistons driven by water.

Water-lily

Water-meter

W. of crystallisation, (phys.) most crystals cntn. water in molecular combination, wh. escapes with heating; e.g., in gypsum, each molecule of calcium sulphate is assoctd. with 2 molecules of water, wh. are expelled in heating, leaving plaster of Paris (q.v.). Salts without W. of C. are said to be *anhydrous*. **W.-plantains**, *Alisma plantago*, perennial plant, grows on banks of rivers and ponds, violet-coloured flowers, broad leaves; *A. natans*, floating water-plantain, white flowers with yellow spot; *A. ranunculoides*, the lesser water-plantain, narrow tapering leaves. **W. polo**, game betw. 2 teams of 7 swimmers with hollow leather ball, wh. has to be thrown into opponents' goal. **W.-power installations**, power stations for obtg. energy afforded by water falling to a lower level; used by electricity works; determining factors, quantity of water available, effective drop; natural water courses are regulated by dams forming reservoirs at high level, from wh. water is led by pipes to turbines at low level. **W. (jet) pump**, for pumping air and gases. Water issuing from jet at high speed plunges into divergent pipe, carrying with it air and creating a vacuum, wh. may be as low as

vapour pressure of water. **W.-rall**, an aquatic bird not uncommon in Gt. Brit., in marshy places, where it breeds among the dense reedbeds. Widely distributed through Europe, Asia, and Africa. Migratory. Brown upper-, grey underplumage, with white bars at sides and yellowish rump. Very shy and difficult to approach. **W.-rat**, *Microtus amphibius*, common name for a species of vole (q.v.), fnd. throughout Europe. **W.-skaters**, predatory insects, which run about on the surface of ponds and streams. **W.-spider**, aquatic insect frequenting ponds and ditches; constructs a dome-shaped shelter among pond-weeds, filling it with air carried down from the surface on the underside of the body; feeds on various forms of aquatic life. **W. tower**, tank for water set on top of tower, yielding supply at a steady and suffic. pressure. **W. violet**, *Hottonia palustris*, pond plant with submersed divided leaves; white or pinkish flowers, growing out of the water. **W.-wagtails**, small passerine birds, distinguished as "ambulators," or walking birds; they all have a graceful way of running or walking (never hopping like finches), the tail moving constantly up and down. Insect feeders. Species resident in Britain are: pied-wagtail, grey wagtail; visiting summer migrants: yellow, blue-headed, white wagtails. **W.-wheel**, water-power motor of low power suitable only for small fall and slow speeds. *Overshot Wheel*, has a water supply from above, *undershot W.*, from below; *Sprinklers* revolve by repulsion. **W.-works**, provide a supply of pure water for consumers supplied from mains, wh. take water from

Waterbuck, large antelope of Africa, characterised by its long, sub-lyrate horns, which are ringed nearly throughout their length.

Waterbury, tn., Connecticut, U.S.A., on Naugatuck Riv.; pop., 99,900; watch manuf., photographic materials, chemicals.

Water-buck

Watered stock, shares in a co. wh. has incr'd. its nominal capital without increasing its assets.

Waterfarcy, (vet.) form of *lymphangitis* (inflammation of lymphatic glands) to wh. horses are subject, characterised by excessive swelling of the leg, with pain and fever.

Waterford, 1) marit. co., Munster, I.F.S.; area, 708 sq.m.; pop., 78,600; surface generally mountainous (*Knockmaldown Mts.*, 2,609 ft., *Comeragh Mts.*, 2,470 ft.); flat and marshy in E.; rivs.: Blackwater, Suir; dairy-farming, cattle-breeding, fisheries, marble, copper. 2) Co. tn. of W., on Riv. Suir, at head of W. Harbour; seapt.; pop., 27,000.

Waterhouse, 1) **Alfred** (1830-1905), Brit. architect; R.A., 1885; treasurer of R.A., 1898; *Owens College and Town Hall*, Manchester; *Natural History Museum*, London, etc. 2) **W., John Wm.** (1849-1917), Brit. painter; R.A. 1895; *The Lady of Shalott*, 1888; *The Magic Circle*, 1886 (both in Tate Gallery), etc.

Waterloo, Belgian vill., nr. Brussels; scene of decisive victory of Wellington and Blücher over Napoleon 18 June, 1815; brought Napoleonic Wars (q.v.) to conclusion. British losses are stated at c. 13,000, Prussian at c. 7,000, Fr. at c. 37,000, with all their guns, ammunition, and baggage.

Waterloo cup, the "blue riband" of coursing (q.v.), competed for annually in Feb. at Altcar, Lancashire.

Waterloo with Seaforth, urb. dist., Lincs, Eng., residential suburb of Liverpool; watering-place, on Irish Sea; pop., 31,200.

Watermark, faint design in paper made by a raised wire, worked into the desired

shape, which is fastened on the wire cloth of the mould (hand method), or, in modern machine methods (*see PAPER*), on the "dandy roll," which presses down on the forming sheet just as the pulp is well drained and before the sheet is passed through drying rollers. Early water marks have given names to several sizes of paper, such as foolscap, pot, crown, post, elephant, etc. To-day their chf. function is as a trade-mark in the better papers.

Waterproofing, process of rendering matls. resistant to water: 1) textiles: effected by coatings of indiarubber, linseed oil, asphalt, aluminium acetate, copper aluminium formate, cuprammonium, paraffin wax, and combinations of these. Mackintosh fabric is rubber-impregnated; tarpaulin is coated with linseed oil, asphalt, and pigment; Willesden canvas is waterproofed with cuprammonium; shower-proof woollen garments are mostly lightly dosed with paraffin wax. 2) (Bldgs.): Many materials used, chief classes a) plastic, bituminous asphalt, pitch, tar; b) waxes, e.g., paraffin; c) chemically effective substances, such as soap and alum, powdered iron, etc.; d) membrane, consisting of elastic (gen. bituminous) membrane supported on metal linings which allow for expansion and contraction. Cement sprayed on with "gun," afterwards bituminised, or "mastic," mixture of asphalt or coal-tar pitch and cement or limestone dust, very largely used in bldg. operations. Rubber, cellulose, casein, linseed oil, and many other preparations, are used for walls.

Watershed, elevation dividing 2 river valls. or basins; line of division betw. 2 riv. systems; (*loosely*) river basin.

Waterspout, pillar of water up to 60 or 70 ft. in diameter and 3,000 ft. high, drawn upward by funnel-shaped mass of whirling cloud wh. descends vertically to meet it.

Watford, tn. in Herts, Eng.; pop., 56,800; paper mills, silk factory, breweries.

Watling Island, one of the Bahamas, W. Indies; first of the New World discoveries of Columbus, Dec. 14, 1492.

Watling Street, Roman road in Eng., connecting Dover, London, St. Albans, Wroxeter, and Chester; partly followed by Holyhead Road.

Watson, **John**: *see* MACLAREN, IAN. **W., Sir William** (1858-), Eng. poet; pubd. *Prince's Quest*, 1880; *Wordsworth's Grave*, 1890; *Poems, Brief and New*, 1925; etc.

consumption; 1 W. = 0.2386 small calories per second; 1 *kilowatt* = 1000 W. = 0.736 h.p.; 1 *kilowatt hour* = 859734 small calories = 1 Board of Trade Unit.

Watteau, Jean Antoine (1684-1721), Fr. painter; *Fêtes Champêtres*.

Wattenscheid, tn., Arnsberg, Ger., in the Ruhr dist.; pop., 63,800; coal mines.

Wattle, (bot.) name of a species of acacia native to Australia and S. Africa. Also known as *mimosa* (q.v.).

Wattle and daub, (bldg.) primitive method of bldg. walls with interlaced twigs daubed with mud or mortar.

Wattling, (fort.) plaited or interwoven withes, (q.v.), placed as hurdles for the protection of escarpments (q.v.). **W.-work**, in basket-making, method of plaiting in wh. stakes are placed in ground and withes interwoven across them.

Watts, Geo. Fredk. (1817-1904), Brit. historical and portrait painter and sculptor; R.A., 1867; O.M., 1902; painted fresco in Lincoln's Inn Hall, 1853-59; made colossal equestrian group for Rhodes's grave, 1903; presntd. many portrs. and symbolic pntngs. to Nat. Portr. and Tate galleries. **W., Isaac** (1674-1748), Eng. Non-conformist theologian and hymn-writer; pastor of Independent congregation, Mark Lane, London, 1700; pubd. *Horae Lyricae*, 1706; *Divine and Moral Songs for Children*, 1720; etc.

Watts-Dunton, Theodore (1832-1914), Eng. man of letters; close friend of Rossetti and Swinburne; contrib. to the *Examiner* and *Athenaeum*; pubd. poems: *The Coming of Love*, 1897; prose-romance, *Aylwin*, 1898; *Poetry and the Renaissance of Wonder*, 1916; ed. Geo. Borrow's *Lavengro* and *Romany Rye*.

Wattle

Watts Indicator diagram, (tech.) device showing automatically relation betw. pressure and volume during stroke in piston of steam engine.

Watzmann, highest peak (8,901 ft.) of the Berchtesgaden Alps, Bavaria, overlooking Königssee.

Wave-mechanics (Heisenberg, de Broglie), most recent develop. of physical theory, accdg. to wh. any moving particle (electron, proton, atom), behaves in certain respects as if it were wave-like in nature. Thus electrons supposed by Bohr (q.v.) to be revolving around nucleus of atom are really closed rings of waves.

Waveney, riv. on boundary betw. Norfolk and Suffolk; 50 m.; formerly entered sea at Lowestoft; now turns N. to join Yare, nr. Yarmouth.

Waverley Novels: see SCOTT.

Waves, are propagated in a medium, and are due to the fact that a periodic or vibratory disturbance of some kind in one part of the medium affects neighbouring parts, and so travels onwards at a cert. speed depend. on medium; in longitudinal waves disturbance is in same direction as that of propagation, e.g., sound waves in air, where particles of air move to and fro in direction of propagation. W. on water surface (sea, pool) are transverse; so are electro-magnetic W. in the ether; state of electro-magnetic disturbance in a direc. at rt.-angles to direc. of waves. By analogy we speak of *crest* and *trough* of all W., meaning extremes of disturbance. **W.-length** is distance betw. 2 crests or troughs. **Frequency**, no. of vibrations per second. **Velocity**, therefore, equals frequency \times wave-length. **Electro-magnetic wave-lengths**: ($1\mu = 1/1000$ mm. $1m\mu = 1/1000\mu = 1/1,000,000$ mm). γ rays: $0.5 \times 10^{-10}m\mu$; hardest X-rays: 10^{-9} mm.; soft X-rays: 10^{-7} mm.; ultra-violet rays 10^{-4} mm.; **visible light**: 0.00037 mm. (violet), -0.00077 mm. (red); the other spectral colours in between; heat waves, 0.3 mm., shortest elec. waves produced: 3 mm. Ultra-short W.: 1-10 metres; short waves: 10-100 m.; **broadcasting waves**: 200-2,000 m.; waves of wireless telegraphy: 1.5-15 km.; telephone current: 150-3,000 km.; industrial alternating current: 5,000-20,000 km. **Amplitude** is height of W., diff. of level betw. *crest* and *trough*. **Reflection and refraction** (qq.v.) occur when waves meet boundary of anoth. medium; **stationary W.**, so called when W. are reflected back on themselves: e.g., W. along stretched rope vibrated at one end; W. of sea reflected from shore. See also INTERFERENCE; BEATS; DAMPING; WIRELESS TELEGRAPHY; NODES AND LOOPS.

Wave theory, see UNDULATORY THEORY.

Wax, *beeswax*, secretion of bees and cert. cochineal insects, resembling fat; yellowish

substance, insoluble in water; used for best type of candles; also in polishes, ointments, cert. paints and inks, modelling, etc. Bees consume abt. 10 lbs. of honey to produce 1 lb. wax. **Vegetable w.**, from cert. palms and other trop. plants; **mineral w.**, ceresin, obt'd. from soft paraffin (ozokerite). **W. flower**, *Hoya carnosa*, Asiatic, trop. plant with thick, glossy leaves and wax-like flowers. **W. myrtle**: see CANDLE TREE. **W. tree**, *Rhus succedanea*, Japanese species of sumach (q.v.), from fruits of wh. wax is obt'd.; used in China and Japan in candle-making.

Waxbill, *Munia punctularia*, species of weaver-bird (q.v.).

Waxwing, derives its name from the wax-like tips on the secondary quills in adult bird. Found in N. Europe, N. Asia, and N. America, occasional visitor to Brit. in winter, on its southward migration. Handsome, ruddy plumage, with crest on head and yellow tip to tail feathers.

Wax-work, modelling or casting of figures, esp. of living objects, from a medium usu. consisting chfly. of beeswax; anc. Egyptians made figures of deities in this way, and Greeks in addition to this made dolls; wax masks of their ancestors played important part in ceremonies of noble Roman families; and in Mid. Ages wax effigies of prominent persons were common. Use in witchcraft (perhaps still surviving) consisted in wounding wax figures of one's enemies, who were themselves believed to suffer corresponding injury; exhibitions of wax-work effigies of prominent or notorious persons popular in 18th cent. (cf. RUSSAUN). W. has also been put to great scientific use, esp. in anatomy.

Wayang, Javanese shadow puppet show, in wh. coloured puppets are used.

Wayland, Wieland, the Smith, figure of Norse mythology. Wayland Smith's Cave, a dolmen on Berkshire Downs, E. of Swindon, England.

Wayzgoose, annual entertainment held by printing-house employees.

Waziristan, dist., in S. of N.W. Frontier Prov., India; mountainous and barren; in Brit. sphere of influence (pol. agencies of Tochi in N. and Wana in S.); 5,100 sq.m.; pop., c. 50,000 (Pathans).

Weal, localised swelling of the skin; may arise from insect bites or from blows with a cane; caused by exudation of fluid from blood capillaries.

Weald, The, wooded tract, S.W. Kent and N.E. Sussex, Eng., bctw. N. and S. Downs; anc. Forest of Andredswald, partly surviving in Ashdown Forest; formerly centre iron industry. **Wealden**, pertaining to, resembling the Weald, esp. in its characteristic geological formation; series of sandstone and clay strata forming the lower part of the Lower Cretaceous system, over 2,000 ft. thick.

Wealth, (econ.) term used to connote all consumable utilities, requiring labour for their production, and possessing exchange value.

Weaning; children are weaned, i.e., gradually broken of the habit of taking nourishment from the breast, in the period following the 8th month of life; the process shd. be complete by the end of the first year.

Wear, riv., Durham, Eng., flows past Durham into N. Sea at Sunderland; length 65 miles.

Weasel, small, long-bodied, short-limbed carnivore, distribtd.

thr. Eur.: slightly larger than the rat; brown and white fur; short, hairy tail; very destructive; robs nests, kills poultry and rabbits.

Weather, state of the atmosphere with respect to heat or cold, wetness or dryness, calm or storm, degree of cloudiness and other meteorological conditions; see METEOROLOGY.

W.-cock, or *vane*, figure set at the top of steeples, etc., which the wind turns so as to indicate from what quarter it is blowing; they often take the form of some animal (of which the cock is the commonest), though in mod. times usu. made in form of an arrow.

W. forecast, prediction of weather in near future, based on position and movements of anti-cyclones and cyclones (q.v.), and, on careful consideration, of general meteorol. reports received from selected localities, from wh. a chart showing isobars and isotherms (q.v.) and direction and strength of wind is drawn out; cf. BUCHAN, ALEX.

W.-glass: see BAROMETER.

Weaver, Sir Lawrence (1876-1930), Eng. archit., architect. ed. of *Country Life*, 1910-16; director of U.K. Exhibits, Brit. Emp. Exhibition, 1923-25; auth. *Memorials and Monuments*, 1925; *Tradition and Modernity in Plasterwork*, 1928.

Weaverbirds, singing passerine birds of trop. Africa and Asia; build skilfully woven, long, bag-shaped nests, suspended from branches of palms or trees overhanging water.

Weaving, working up of yarns (q.v.) into textiles, on looms worked by hand, by foot or by machinery (see JACQUARD POWER-LOOM). Longitudinal threads (*warp*) are raised and lowered in acc. with desired pattern; thr. space thus created (*shed*) shuttle is shot, carrying intersecting thread (*weft*); intersected interlacings (*leashes*) of warp and weft; smooth, twilled, craped, satin leashing webs (*taffetas*).

Webb, Sir Aston (1849-1930), Brit. archit.; Pres. of Architect. Assoc., 1884; of Roy. Inst. of Brit. Architects, 1902; and of Roy. Acad., 1919-25; restored St. Bar-

tholomew's, Smithfield; designed new front of Buckingham Palace, etc. **W., Mary** (1881-1927), Brit. novelist: *Golden Arrow*, 1916; *Precious Bane*, 1924. *Femina*—Vic

Henriuse Prize, 1925. **W., Matthew** (1848-83), Brit. swimmer, "Captain W."; served in mercantile marine; swam English Channel, Dover-Calais, in 21½ hrs.; killed in attempt to swim rapids and whirlpool, Niagara, 24 July, 1883. **Webb, Sidney** and **Beatrice**: see PASSFIELD.

Weber, Karl Maria von (1786-1826), Ger. composer: *Der Freischütz*, *Euryanthe*, *Oberon*; instrumental music, compositions for piano. **W., Wilhelm** (1804-91), Ger. physicist; treatise on waves; devised electromagnetic telegraph.

Webley, automatic revolver; .455 in use in Brit. navy.

Webster John (fl. 1602-24), Eng. tragic dramatist; *The White Devil*, 1612; *Duchess Malfi*, 1623, etc.

Webster, Noah (1758-1843), Amer. lexicographer, lawyer and journalist; started *Minerva* (afterward *Commercial Advertiser*) and the *Herald* (afterwards the *N.Y. Spectator*), 1793; pubd. *Grammatical Institute of the English Language*, 1783-85; *Sketches of American Policy*, 1785; and his grt. *American Dictionary*, 1828.

Weddell Sea, large bay betw. W. Antarctic region and Coats Land (10° and 60° W. long.); separated from mainland in S. by ice-barrier; explored by Weddell, 1823, Filchner, 1911-12, and Shackleton, 1915-16.

Wedekind, Frank (1864-1918), Ger. dramatist: *Spring's Awakening*.

Wedge, piece of wood or metal with a sharp edge, used for splitting tree trunks, etc., when it acts in acc. with law of inclined planes. Most tools work on principle of the wedge, e.g. knife, chisel, axe, nail, needle, etc.

Wedgwood, Josiah (1730-95), Eng. ceramist; W. pottery; employed John Flaxman (q.v.) as designer.

Wedmore, vill., Somerset; Treaty of W. betw.

Guthrum and Alfred the Great, 878, under wh. the Danes evacuated Wessex and retired N. of Watling Street.

Wednesbury, bor., Staffs, Eng., 7 m. N.W. Birmingham; iron and coal-mining centre: manuf. iron, steel; pop., 31,500.

Wednesday, 4th day of week, named after Odin (Woden), Norse god, patron of agriculture.

Wednesday, The, Eng. assoc. football club, fndd. 1866 at Sheffield (orig. as *Sheffield W.*): Eng. cup winners, 1896, 1906, League champions, 1903, '04, '29, '30.

Weed, (bot.) any hardy, rank-growing plant wh. tends to choke cultivated crops or garden-plants; harbours of parasitic insects and plant-diseases.

Week, unit of time shorter than a month, consisting in various parts of the world of from 3 to 8 days. Names given to individual days of the 7-day week, which originated in W. Asia and was generally introd. in Europe in 4th cent., suggest that its adoption was due to astrological association with the 7 planets known to the ancient world. The 5-day week, legalised by the U.S.S.R., 1931, abolished fixed Sunday. **Weekly Statement**, of issuing banks (q.v.), publication of balances, important for judging circulation of notes and their backing, and volume of credit cash held by centr. bank for jt. stk. banks. Returns of *B. of Eng.* appear every Friday; those of *Ger.* on 7th, 15th, 23rd and last of every mnth., of *U.S. Federal Reserve Bks.*, every Thursday. See BANK OF ENGLAND. **Feast of Weeks**: see PENTECOST.

Weelkes, Thomas (c. 1575-1623), Eng. composer: madrigals.

Weever, sting-bull, *Trachinus draco*, fish of family *Trachinidae*, having poisonous secretion in spines of dorsal fin; greater **W.** (c. 1 ft.) and lesser **w.** (c. 6 in.), both frequent British seas.

Weevil, beetle having the head prolonged into a rostrum; herbivorous; many species injurious to trees and plants.

Wedekind, Death-mask

Wedge

Weft: see WOOF.

Wegener, Alfred (1880-1930), Ger. meteorologist, and Polar explorer; Greenland exped. 1906-08, 1912-13, 1920.

Wehnelt interrupter, (elec.) autom. current interrupter; functions by generating and destroying little bubbles of steam in current circuit by means of electrolysis (q.v.).

Weichsel: see VISTULA.

Weichselbaum, Anton (1825-1902), Ger. pathologist; with *Albert Fraenkel*, disc. pneumonia bacillus.

Weigall, Arthur Edw. P.B. (1880-). Brit. archaeologist; Ins.-Gen. of Antiquities to Govt. of Egypt, 1905.

Weigela, plant of the family *Dieracilla* (q.v.).

Weight, (phys.) force with wh. a body is attracted to the earth.

W.-lifting, athl. display; raising heavy weights (iron bars, dumbbells, etc.) as an exhib. of strength. Record for putting the W., (i.e., casting a 16 lb. iron ball) is 52 ft. 8 in. (L. Sexton, U.S.A., 1932).

Weighted average: (math.) the mean of a series of values taking into account the weight or importance of each. If x_1, x_2, x_3, \dots be the various values and w_1, w_2, w_3, \dots the corresponding weight or importance of each, the W.A. = $\frac{x_1 w_1 + x_2 w_2 + x_3 w_3 + \dots}{w_1 + w_2 + w_3 + \dots}$

—e.g., if 1000 men earn £2 a week, 3 men £4 and 1 man £50, the weighted av. of earnings per week of these men is $\frac{1000 \cdot £2 + 3 \cdot £4 + 1 \cdot £50}{1000 + 3 + 1}$. If the weights

(w's) are all equal we obtain the *unweighted* or *arithmetic* mean.

Weighing Machine, instr. for determining weight of persons, commodities, heavy objects, etc.; var. kinds suitable for special purposes; loaded rly. trucks are weighed on platforms approached by tracks, dial attached indicating weight. Cf. BALANCE; SCALE; SCALES.

Weights and measures: see Appendix.

Wei-hai-wei, port, Shantung, China, on N. E. coast; pop., 5,300; leased by Gt. Britain, 1898-1930.

Well's disease, epidemic spirochaetal jaundice, a disease communicated by spiro-

chaetes, and characterised by fever, shivering jaundice; named from Adolf Well (1848-1916).

Weimar, city, Ger., cap. Thuringia, on Riv. Ilm; pop., 26,000; mediaeval obs.: Karlsburg Palace; Goethe's House (museum), tombs of Goethe and Schiller. List was musical director here 1810-20, producing many of Wagner's Operas. Ger. Nat. Assembly (1920) adopted constitution of Ger. republic.

Weinberger, Jaromir (1866-). Czech composer; *Schwanda the Beggar*.

Weingartner, Felix von (1863-). Austr. composer and mus. conductor; author of *On Conducting: Memoirs*.

Weininger, Otto (1880-1903), Ger. philos.; *Sex and Character*.

Weir, barrier across river concentrating chl. fall at one point and regulating flow for purposes of navigat., irrigat., or power. May be *solid* (fixed) or *movable*; latter in various forms: *needle gate*; *shutter*; etc. In roller w. dam is formed by steel drum or pipe wh. can be rolled up to permit water to flow underneath.

Weismann, August (1834-1914), Ger. biologist. His *German-Plasm Theory* maintains that the germ-plasm (germ-cell material) of all organisms is transmitted, unchanged (except by mutation, see HEREDITY), from generation to generation, the individual organism being a by-product or offshoot of the direct line, serving the purpose of transmitting the germ-plasm. Hence inheritance of acquired characteristics is impossible.

Weissenburg: see WISMARSBURG.

Weisshorn, mtns., Switzerland: 1) in Pennine Alps, canton of Valais, 14,805 ft.; 2) in Lepontine Alps, canton of Grisons, nr. Splügen Pass, 9,817 ft.; 3) in Rhaetian Alps, canton of Grisons, nr. Flüela Pass, 10,130 ft.

Will o' the wisp, *ignis fatuus*, small blue dancing flame seen over marshes; prob. produced by spontan. combus. of volatile phosphorus compounds in presence of air.

Willoughby, Sir Hugh (c. 1500-54), Eng. navigator; explored in arctic regions, 1553-54, and perished with his 62 companions on coast of Lapland.

Willow, large family of trees and shrubs (*salix*) with dioecian catkin-flowers; widely distributed from Arctic to tropics at high altitudes and in lowlands. Many varieties have been identified. Boughs used for weaving; wood to make cricket bats. Some varieties very ornamental. **W.-borer**, caterpillar of the goat-moth; bores long tunnels in trunks of willow and other trees. **W.-herb**, *Epilobium angustifolium*, rosebay, handsome garden plant with long racemes of rose-coloured flowers.

Willow

Willstätter, Richd. (1872-), Ger. chemist; synthesis of chlorophyll; Nobel Prize (Chem.), 1915.

Will to power, or **master morality** (Nietzsche), morality of the "Superman" (q.r.) as opposed to "slave morality" of Christianity and Socialism.

Wilmington, 1) vill., Sussex; ruins of Norman Priory; Long Man of W., rough fig. of man cut on side of Downs, several times renewed. 2) City, Delaware, U.S.A.; pop., 128,000; R.C. and Prot. Episc. bprics.; iron and steel works.

Wilno, Vilna, 1) prov. N.E. Poland, drained by Riv. Viliya; 11,240 sq.m.; pop., 1,005,570. 2) Cap. of prov., on Riv. Viliya; Gr. Orthodox abpric.; R.C. bpric.; univ.; timber and metal industries. Occupied by Poland, Oct., 1920; annexation confirmed by Conference of Ambassadors, 1923, despite protests of Lithuanians.

Windaus, Adolf (1876-), Ger. chemist; Nobel Prize (Chem.), 1928; prod. artificial increase of vitamins by subjecting ergosterine to ultra-violet rays. Substitute for cod-liver oil.

Windbills: see ACCOMMODATION BILL.

Windermere 1) lake, Westmorland and Lancs; largest in Eng. (10½ m. by ¼-1¼ m.); many islands, wooded shores, mtns. surround head; outlet Riv. Leven, draining into Morecambe Bay. 2) Tn., Westmorland, Eng., on E. shore Lake W., 8½ m. N.W. Kendal; pop., (with *Bowness-on-Windermere*) 5,700.

Windgail, (vet.) soft swelling on horse's fetlock.

Windhoek, cap. S.W. Africa (q.v.), 250 m. from coast; pop., 13,700 (4,600 whites).

Winding-up, procedure for dissolution of companies; either voluntarily by initiative of shareholders, or compulsorily by Order of Court. See also LIQUIDATION.

Windisch-Grätz, Pr. Alfred zu (1787-1862). Aust. gen.; suppressed rebellions in Prague and Vienna, 1848.

Windlass, appar. for moving loads, by means of ropes or chains wound on to drums, operated by hand, steam, or electr.; used mainly on ships.

Window, opening in wall of a bldg. to

admit light and air; existed from earliest times in form of narrow, open slits; ch. windows provided with frames filled in with glass, from 6th cent. Varying types of W. important in distinguishg. periods of architecture. See III.

Window dressing, (banking) manipulation by wh. monthly balance sheet shows bank to be in a stronger position than would otherwise appear; practice much criticised in Eng. still followed by jt. stk. banks, though to a diminishing extent; effected by calling in loans from discount market, arranging that bill portfolios (q.v.) shall be light on day of the balance, and other means.

W.-envelope, envelope with address space transparent, or cut out, through wh. address on letter itself appears. **W.-glass**, produced by blowing large cylinder from plastic glass, cutting it, and spreading it out on iron plate. Thickness defined by ozs. p. sq. feet. See GLASS. **W. Tax**, tax levied in Eng., accdg. to number of windows, in all inhabited houses; introduced 1695 to cover cost of recoinage of silver; repealed 1851 and replaced by Inhabited House duty.

Windsor, House of, royal house of Gt. Brit.; known as H. of W. since 17 July, 1917, when Geo. V relinquished family name of Saxe-Coburg-Gotha together with all rights to Ger. titles for himself and those members of his family who were Brit. subjects.

Winter, (astron.) period betw. the W. solstice (Dec. 22nd) and vernal equinox (Mar. 21st) in N. Hemisphere; or betw. summer solstice (June 22nd) and autumnal equinox (Sept. 23rd) in S. Hemisphere.

W. aconite, *Eranthis*, plant of family Ranunculaceae; early flowering, bearing bright yellow blossoms; found in temperate regions. **W. berry**, shrub of N. Amer. of genus *Ilex*, bearing red berries; also known as black alder. **W. cherry**, fruit of *Physalis alkekengi*, solanaceous herb, of Centr. and S. Amer.; also known as strawberry tomato. The fruit is juicy and acidulous and is used in folk medicine for gravel and gout. **W. King**, nickname of Frederick V. Elector Palatine (*q.v.*), Kg. of Bohemia during winter of 1619-20. **W.-moth**, a small moth well known as a fruit-tree pest; appears in Nov.; female has very abbreviated wings. **W; sports**, inclusive term for such open-air exercises or amusements as require ice or snow as their medium; esp. skating, tobogganing, skiing, curling, etc.

Wintergreen, (bot.) 1) name given to several var. of *Pyrola*, rather rare plants with white or pinkish flowers, found princ. in woods in N. of England. 2) *Gaultheria procumbens*, evergreen Amer. shrub, leaves of wh. yield methyl salicylate, specific for rheumatism.

Wintergreen

Winterthur, tn., canton of Zurich, Switz.; pop., 55,000; machinery, locomotive works, textiles.

Wipper: see *WUPPER*.

Wirballen: see *VIRBALIS*.

Wire, narrow strand of metal, made by drawing bars of metal thr. a succession of *draw plates* (steel, diamond) pierced with conical holes; at each drawing diam. is slightly reduced. Wire annealed by heating betw. each reduction. *Hand-drawn W.* is left hard and unannealed after last drawing. **Wired glass**, thick sheet-glass inlaid with wire netting; used for skylights, bec. if broken it does not fall apart.

Wireless licences, in most countries broadcasting radio is either a Govt. monopoly or under the control of a public or semi-public Corporation, and a licence must be paid for all receiving sets. The accompanying graph shows increase in U.K. receiving sets since 1923, the figure for 1931-32 being 4,630,000.

Numbers of receiving sets in certain other countries, at latest available dates, are: U.S.A. (1931) 12,564,000; Germany (1931), 4,000,000; France (1929), 1,500,000; Japan (1931), 960,000; Sweden (1931), 550,000; Netherlands (1931), 523,600; Canada (1931), 523,100.

Wireless telegraphy and telephony, transmission of signs and speech by electromagnetic waves first observed by Hertz, 1888; first practically applied by Marconi, 1900, who built English wireless station at Poldhu. At first, *spark-transmitters* generating *damped waves* were used with Morse code-signals, reception by *coherer*. Modern stations use *undamped waves*, generated by high-frequency dynamos (for long waves) or by three electro *triode valves*. A high-frequency alternating current flows in and out of the aerial or antenna, wh. has capacity like condenser, but radiates carrier waves in all directions (unless directive aerial used). For telephony, these waves are *modulated* by a *microphone*, wh. imposes variations on aerial current exactly corresponding to sound waves falling on microphone. Waves received by second *aerial*; high aerials are most effective, but small *frame aerials* most convenient, and selective for direction; gas-pipes, etc., may sometimes serve. Receiving set must be *tuned* so as to respond to frequency of carrier wave. Tuning by varying *inductance* (honeycomb coils) or *capacity* (condenser). High-frequency current will not pass telephone receiver and must first be rectified; simplest method by *crystal* (mineral, e.g., galena, in loose contact with metal point), or valve with grid leak. For long-distance reception, H.F. current is first amplified, then rectified, then further *low frequency* (speech current) amplification, until *loud speaker* can be operated. Amplification in *stages*, various possibilities of *coupling* make variety of circuits; great range rendered possible because 1) Earth is conductor; 2) the Heavieside layer, conducting (ionised) stratum of atmosphere, 15 to 20 m. high, reflects waves back. Long waves cannot be sent out in one direction only; hence, great power necessary for long distances; *short waves* can be concentrated like searchlight to *beam*, but will not bend round earth. *Selectivity* of receivers becoming more and more necessary, as number of powerful stations increases; best attained by

WIRELESS (RECEIVING

superheterodyne receivers. These contain generator of oscillations, which are fed into receiving circuit along with waves received, producing beats, or, in effect, reducing frequency of oscillations received to same low and constant value whatever frequency of reception. Remainder of receiver is adapted to this frequency only. See **AMPLIFICATION**; **VALVE**, etc.

The Plate on next page shows: *Transmitting Aerial*: long grid of parallel horizontal wires, suspended by insulators between tops of two high towers, forming with earth a capacity (condenser), into which high-frequency alternating current is fed from wave generator, modulated by microphone or land-line current. Modulated waves radiated in all directions. *Beam Aerial* for short waves: two similar parallel grids, one radiates, other acts as reflector (like polished metal behind lamp). *Triode (three-electrode) valve*: filament of tungsten wire coated with thorium, heated by current, produces electrons (*q.v.*) inside grid or cage of tungsten wire: outside these anode plate of sheet tungsten. Positive end of H.T. battery is applied to anode, which then attracts electrons, producing current. Small voltages applied to grid cause electron current to vary. *Low-frequency amplifier*: varying output from transformer applied to grid causes much larger variations in anode circuit, which includes loud speaker, by which variations of current are transformed into sound. *Triode as detector* with grid-leak: oscillations received are rectified in grid circuit, and influence anode circuit as above. *Transmitting circuit*: grid connected through coil to earth; coil in anode circuit coupled inductively to grid coil. Slightest variation of anode current acts on grid coil, varying potential of grid, this reacts on anode circuit which again reacts on grid; powerful oscillations are thus built up, which can be fed to aerial by induction. *Broadcasting*: Land telephone wire frequently made use of both for transmitting from microphone to radiating station, and also for transmitting material received by wireless to station for re-broadcasting. Weakest link is listener's loud-speaker, which fails to respond to lowest and highest frequencies, and introduces much distortion.

Wis., abbr. Wisconsin.

Wisbech, bor., Isl. of Ely, Cambridgesh., Eng., on Riv. Nene; in agric. and fruit-growing dist.; pop., 12,000.

Wisby: see **VISBY**.

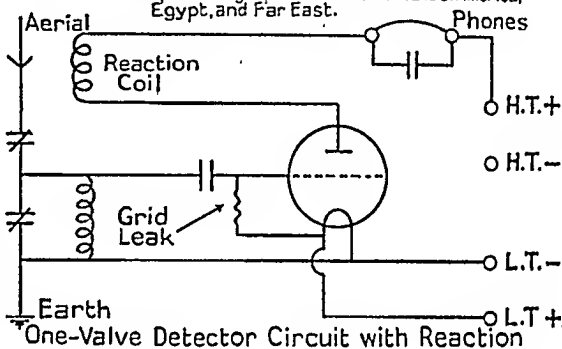

Wisconsin, 1) ("Badger") State of U.S.A., betw. Mississippi R. and St. Lawrence lakes; 56,066 sq.m.; pop., 3,000,000; rich corn land; copper, iron, and zinc mines; wood and leather indust.; cap., *Madison*; largest tn., Milwaukee. 2) Left trib. (600 m.) of the Upper Mississippi.

Wood, the hard, fibrous substance forming the trunks and branches of trees covered with bark and augmented yearly by rings (*cambium ring*). The young wood (*alburnum* or sap-wood) is distinguished from the inner, more mature wood (*duramen* or heart wood). W. may be classed as: *soft* (conifers), *hard* (pear, oak, beech), and *cabinet* (mahogany, ebony, etc.). Used for bldg., paper-making, carpentering, and turnery, also as fuel. *The Seasoning and Preservation of Wood*: wood must be dried slowly and thoroughly before being used, otherwise objects made from it change shape or crack owing to contraction. Kiln drying by artificial heat now superseding air-drying; care is nec. to avoid outside layer drying quickly and preventing escape of moisture from within. W. decays only when moist, by action of micro-organisms wh. feed on proteins; preservation effected by impregnation with antiseptics (creosote, corrosive sublimate, chloride of zinc, sulphate of copper, sugar, etc.), usu. with use of vacuum or pressure, or both. Living tree may be injected, before felling, with preservative wh. is then carried thr. wood by sap. **See** **TIMBER**. **W. alcohol**, **wood naphtha**, impure methyl alcohol, *methanol* (CH_3OH), obtd. by destructive distillation of wood (heating in closed, airtight retorts), also synthetically; used as solvents for varnishes, in prodn. of formaldehyde, as an antifreeze and as denaturant in methylated and indus. spirits; poisonous, producing blindness; alternative name in U.S.A. for methylated spirits (*q.v.*). W. distillation also produces *pyroligneous* or W. acid (brown fluid), chf. ingredient acetic acid; a by-product is charcoal (*q.v.*). **W.-engraving**, a method of reproduction by printing. The picture or design is cut in the wood-block (usually boxwood), the portions wh. are to appear black being left in relief. Zeolites, minerals of varying composition, but all hydrated aluminosilicates or ferrosilicates of alkali and/or alkaline earth metals. Very important owing to "base-exchange" property, i.e., surface atoms of alkali metal are replaced by alkaline earth metal when in contact with solution of latter, without change in mineral; contact with strong solution of alkali metal causes latter to displace alkaline earth metal. Hard water (solution of bicarbonates of calcium and magnesium) can be softened by simple contact with a zeolite sand (see GREENSAND); the Ca and Mg are retained by the sand, which gives up sodium to water to replace them. When sand is exhausted, it is regenerated by contact with strong solution of common salt (sodium chloride). Water so softened contains bicarbonate of soda; and hence is not suitable for all purposes, but harmless for all culinary and domestic purposes, washing, etc.

THE METRIC SYSTEM

AND THE EQUIVALENT IN ORDINARY ENGLISH WEIGHTS AND MEASURES

The exact value of the unit is given in various denominations, and the values of the multiples and divisions of the unit can be found by altering the place of the decimal point.

1. MEASURES OF LENGTH

The unit is the Mètre. It is the ten-millionth part of a meridian arc from the Pole to the Equator.

A Mètre is equal to 39·370113 inches, 3·280843 feet, 1·0936143 yards, 0·1988 pole, 0·04972 chain, 0·0004972 furlong, 0·0006213 mile.
